Introduction to Error Control Codes Salvatore Gravano,2001 This textbook provides a firm foundation for those studying the field of error control codes giving step by step instruction on this complex topic beginning with single parity code checks and repetition codes Through these basic error control mechanisms the fundamental principles of error detection and correction minimum distance and error control limits are considered With the use of detailed examples it guides students from basic error control codes through linear codes cyclic codes linear feedback shift registers vector fields Galois fields BCH codes and convolutional codes There are many detailed examples throughout the book to illustrate the principles and complex mathematical proofs are omitted where possible to keep the text concise and easy to follow

Error Control Coding Peter Sweeney,2002-04-29 Error Control Coding From Theory to Practice provides a concise introduction to basic coding techniques and their application The fundamental concepts of coding theory are explained using simple examples with minimum use of complex mathematical tools The selection of appropriate codes and the design of decoders are discussed Bridging the gap between digital communications and information theory this accessible approach will appeal to students and practising engineers alike The clear presentation and practical emphasis make this book an excellent tool for both communications and electronic engineering students Practitioners new to the field will find this text an essential guide to coding Features include End of chapter problems to test and develop the readers understanding of the most popular codes

and decoding methods Finite field arithmetic and algebraic decoding methods for BCH and Reed Solomon codes Detailed coverage of Viterbi decoding and related implementation issues Turbo codes and related code types including Gallager codes and turbo product codes Practical examples of MAP and SOVA decoding for turbo codes *Handbook of Algebra*, 1995-12-18 Handbook of Algebra defines algebra as consisting of many different ideas concepts and results Even the nonspecialist is likely to encounter most of these either somewhere in the literature disguised as a definition or a theorem or to hear about them and feel the need for more information Each chapter of the book combines some of the features of both a graduate level textbook and a research level survey This book is divided into eight sections Section 1A focuses on linear algebra and discusses such concepts as matrix functions and equations and random matrices Section 1B cover linear dependence and discusses matroids Section 1D focuses on fields Galois Theory and algebraic number theory Section 1F tackles generalizations of fields and related objects Section 2A focuses on category theory including the topos theory and categorical structures Section 2B discusses homological algebra cohomology and cohomological methods in algebra Section 3A focuses on commutative rings and algebras Finally Section 3B focuses on associative rings and algebras This book will be of interest to mathematicians logicians and computer scientists *Annales des télécommunications*, 2005-07 Computer Books and Serials in Print, 1985 Handbook of Applicable Mathematics, Combinatorics and Geometry Walter Ledermann, Steven Vajda, 1985 Volume 5 **Proceedings**, 1993 *Scientific and Technical Books and Serials in Print*, 1984 **Mu'tah lil-buḥūth wa-al-dirāsāt**, 1991 **Coding and Information Theory** Richard Wesley Hamming, 1986 Focusing on both theory and practical applications this volume combines in a natural way the two major aspects of information representation representation for storage coding theory and representation for transmission information theory *1993 International Symposium on Communications*, 1993 Codes for Detecting and Correcting Unidirectional Errors Mario Blaum, 1993
