Welding

Principles and Applications

Larry Jeffus

Welding is a process of joining materials, usually metals or thermoplastics, by using heat as a heat source to melt the workpieces together. The heat can be provided by a gas flame, an electric arc, or a laser beam. The molten material then cools and solidifies, forming a joint that is often stronger than the original materials. Welding is a common manufacturing process used in a wide variety of industries, including automotive, aerospace, and construction.
