Filar, Vladimir Grigor'evich Gaitsgory, Koichi Mizukami, 2000 Modern game theory has evolved enormously since its inception in the 1920s in the works of Borel and von Neumann and since publication in the 1940s of the seminal treatise Theory of Games and Economic Behavior by von Neumann and Morgenstern The branch of game theory known as dynamic games is to a significant extent descended

from the pioneering work on differential games done by Isaacs in the 1950s and 1960s. Since those early decades, game theory has branched out in many directions, spanning such diverse disciplines as mathematics, economics, electrical and electronics engineering, operations research, computer science, theoretical ecology, environmental science, and even political science. The papers in this volume reflect both the maturity and the vitality of modern-day game theory in general and of dynamic games in particular. The maturity can be seen from the sophistication of the theorems, proofs, methods, and numerical algorithms contained in these articles. The vitality is manifested by the range of new ideas, new applications, the number of young researchers among the authors, and the expanding worldwide coverage of research centers and institutes where the contributions originated.

Advances in Dynamic Games and Applications Tamer Başar, Alain Haurie, 1994. Recent years have witnessed a surge of activity in the field of dynamic games, both theory and applications. Theoretical as well as practical games in problems in zero-sum and non-zero-sum games, continuous-time differential and discrete-time multistage games, and deterministic and stochastic games are currently being investigated by researchers in diverse disciplines such as engineering, mathematics, biology, economics, management science, and political science. This surge of interest has led to the formation of the International Society of Dynamic Games (ISDG) in 1990, whose primary goal is to foster the development of advanced research and applications in the field of game theory. One important activity of the Society is to organize biannually an international symposium which aims at bringing together all those who

contribute to the development of this active field of applied science In 1992 the symposium was organized in Grimentz Switzerland under the supervision of an international scientific committee and with the help of a local organizing committee based at University of Geneva This book which is the first volume in the new Series Annals of the International Society of Dynamic Games see the Preface to the Series is based on presentations made at this symposium It is however more than a book of proceedings for a conference Every paper published in this volume has passed through a very selective refereeing process as in an archival technical journal
