*A System for Monitoring Cost and Payment with 5D BIM* Xiao Feng Lin, 2016 Cost and payment monitoring are claimed as the essential process for project management Cost and payment monitoring is used for tracking the status of project cost during the construction process However the current information of cost and payment in the monitoring practice has to manually check with several documents including drawing cost data and schedule plans So the traditional practice has consumed more time with unnecessary works and caused some difficulties in the re calculation to monitor cost and payment progress To overcome this problem this research proposed the system for monitoring cost and payment progress by using building information modelling BIM which is referred to 5D BIM The system could be applied to interchange time and cost information with 3D model To develop this system current practices on cost and payment monitoring is explored by interviewing experts about related process and information With the result of interview the framework of the cost and payment monitoring system is developed This system applies visual programming language Dynamo to link information between Revit and Excel In preconstruction stage the information of cost and schedule plan is defined in Excel The system is developed by using the visual programming extension to interchange cost and time information with 3D model that interacts data from excel to 3D model In construction stage actual progress of cost and payment are collected and stored in Excel and 3D model the visual programming extension is designed to calculate earn value cost progress and payment progress in Excel In addition the status of delay over budget and unpaid works can be visualized in a color scheme in 3D model by a visual programming extension Result shows that the proposed system is able to monitor cost and payment progress with visualization automatically
