RECOMMENDATION As a former senior military leader I learned early on that my personal expertise of a subject was less important than my ability to ask better questions of the experts Often I had no expertise at all but was required to make critical high risk decisions under very tight time constraints In this book Teri helps us understand the better questions we should be asking about our data data systems networks architecture development vendors and cybersecurity writ large and why the answers to these questions matter to our organizations bottom line as well as our personal liability Teri writes in a conversational tone adding personal experiences that bring life and ease of understanding to an otherwise very technical complex and sometimes overwhelming subject Each chapter breaks down a critical component that lends to a comprehensive understanding or can be taken individually I am not steeped in cyber but Teri s advice and recommendations have proven critical to my own work on Boards of Directors as well as my leadership work with corporate CISOs cybersecurity teams and C Suite executives In a time constrained world this is a worthy read
