Process Intensification Technologies for Biodiesel Production Anton Alexandru Kiss, 2014-03-15 This book is among the first to address the novel process intensification technologies for biodiesel production in particular the integrated reactive separations It provides a comprehensive overview illustrated with many industrially relevant examples of novel reactive separation processes used in the production of biodiesel e g fatty acid alkyl esters reactive distillation reactive absorption reactive extraction membrane reactors and centrifugal contact separators Readers will also learn about the working principles design and control of integrated processes while also getting a relevant and modern overview of the process intensification opportunities for biodiesel synthesis Biodiesel is a biodegradable and renewable fuel that currently enjoys much attention In spite of the recent advances the existing biodiesel processes still suffer from problems associated with the use of homogeneous catalysts e g salt waste streams and the key limitations imposed by the chemical reaction equilibrium thus leading to severe economic and environmental penalties The integration of reaction and separation into one operating unit overcomes equilibrium limitations and provides key benefits such as low capital investment and operating costs Many of these processes can be further enhanced by heat integration and powered by heterogeneous catalysts to eliminate all conventional catalyst related operations using the raw materials efficiently and the reaction volume while offering high conversion and selectivity and significant energy savings The targeted audience of this book includes both academia students and researchers and industry project leaders technology managers researchers biodiesel producers and equipment suppliers

Process Integration in Biochemical Engineering Urs von Stockar, Luuk van der Wielen, 2003-04-08 Process integration has been one of the most active research fields in Biochemical Engineering over the last decade and it will continue to be so if bioprocessing is to become more rational efficient and productive This volume outlines what has been achieved in recent years Written by experts who have made important contributions to the European Science Foundation Program on Process Integration in Biochemical Engineering the volume focuses on the progress made and the major opportunities and in addition on the limitations and the challenges in bioprocess integration that lie ahead The concept of bioprocess integration is treated at various levels including integration at the molecular biological bioreactor and plant levels but also accounting for the integration of separation and mass transfer operations and biology fluid dynamics and physiology as well as basic science and process technology *Dynamics and Control of Chemical Reactors, Distillation Columns and Batch Processes (DYCORD+ '92)* J.G. Balchen, E.D. Gilles, K.V. Waller, J.B. Rawlings, 2014-05-23 In addition to the three main themes chemical reactors distillation columns and batch processes this volume also addresses some of the new trends in dynamics and control methodology such as model based predictive control new methods for identification of dynamic models nonlinear control theory and the application of neural networks to identification and control Provides a useful reference source of the major advances in the field *20th European Symposium of Computer Aided Process Engineering* Sauro

Pierucci, G. Buzzi Ferraris, 2010-06-03 ESCAPE 20 is the most recent in a series of conferences that serves as a forum for engineers, scientists, researchers, managers, and students from academia and industry to present and discuss progress being made in the area of Computer Aided Process Engineering (CAPE). CAPE covers computer-aided methods, algorithms, and techniques related to process and product engineering. The ESCAPE 20 scientific program reflects the strategic objectives of the CAPE Working Party to check the status of historically consolidated topics by means of their industrial application and to evaluate their emerging issues. Includes a CD that contains all research papers and contributions. Features a truly international scope with guest speakers and keynote talks from leaders in science and industry. Presents papers covering the latest research in key topical areas and developments in computer-aided process engineering. CAPE [Advances in Drying](#)

Arun S. Mujumdar, 1984 **Scientific and Technical Aerospace Reports**, 1992 *Problem Solving in Chemical and Biochemical Engineering with POLYMATH, Excel, and MATLAB* Michael B. Cutlip, Mordechai Shacham, 2008 *Problem Solving in Chemical and Biochemical Engineering with POLYMATH, Excel, and MATLAB* Second Edition is a valuable resource and companion that integrates the use of numerical problem solving in the three most widely used software packages: POLYMATH, Microsoft Excel, and MATLAB. Recently developed POLYMATH capabilities allow the automatic creation of Excel spreadsheets and the generation of MATLAB code for problem solutions. Students and professional engineers will appreciate the ease with which problems can be entered into POLYMATH and then solved independently in all three software packages while taking full advantage of the unique capabilities within each package. The book includes more than 170 problems requiring numerical solutions. This greatly expanded and revised second edition includes new chapters on getting started with and using Excel and MATLAB. It also places special emphasis on biochemical engineering with a major chapter on the subject and with the integration of biochemical problems throughout the book.

General Topics and Subject Areas Organized by Chapter:

- Introduction to Problem Solving with Mathematical Software Packages
- Basic Principles and Calculations
- Regression and Correlation of Data
- Introduction to Problem Solving with Excel
- Introduction to Problem Solving with MATLAB
- Advanced Problem Solving Techniques
- Thermodynamics
- Fluid Mechanics
- Heat Transfer
- Mass Transfer
- Chemical Reaction Engineering
- Phase Equilibrium and Distillation
- Process Dynamics and Control
- Biochemical Engineering
- Practical Aspects of Problem Solving Capabilities
- Simultaneous Linear Equations
- Simultaneous Nonlinear Equations
- Linear Multiple Linear and Nonlinear Regressions with Statistical Analyses
- Partial Differential Equations
- Using the Numerical Method of Lines
- Curve Fitting by Polynomials with Statistical Analysis
- Simultaneous Ordinary Differential Equations
- Including Problems Involving Stiff Systems
- Differential Algebraic Equations and Parameter Estimation in Systems of Ordinary Differential Equations

The book's Web Site <http://www.problemsolvingbook.com> provides solved and partially solved problem files for all three software packages plus additional materials. Describes discounted purchase options for educational version of POLYMATH available to book purchasers. Includes detailed selected problem solutions in Maple, Mathcad, and Mathematica.

Integration of Process Design and Control Evangelhos Zafiriou, 1994 Paperback The existence of interactions between the design of a process and that of its control system have been known to industrial practitioners for a long time In the past decade academic research has produced methodologies and tools that begin to address the issue of designing processes that are flexible can be controlled reliably and are inherently safe This publication unites the work of academics and practitioners with interests in the integration of process design and control in order to examine the state of the art in methodologies and applications The scope covers the design of chemical plants at different stages of detail It also examines control issues from the plantwide level where for example recycles between units can be important to the specific unit level where the availability or selection of measurements might be the most important factor

Separation Process Engineering Phillip C. Wankat, 2016-08-09 The Definitive Up to Date Student Friendly Guide to Separation Process Engineering With More Mass Transfer Coverage and a New Chapter on Crystallization Separation Process Engineering Fourth Edition is the most comprehensive accessible guide available on modern separation processes and the fundamentals of mass transfer In this completely updated edition Phillip C Wankat teaches each key concept through detailed realistic examples using real data including up to date simulation practice and spreadsheet based exercises Wankat thoroughly covers each separation process including flash column and batch distillation exact calculations and shortcut methods for multicomponent distillation staged and packed column design absorption stripping and more This edition provides expanded coverage of mass transfer and diffusion so faculty can cover separations and mass transfer in one course Detailed discussions of liquid liquid extraction adsorption chromatography and ion exchange prepare students for advanced work Wankat presents coverage of membrane separations including gas permeation reverse osmosis ultrafiltration pervaporation and applications An updated chapter on economics and energy conservation in distillation adds coverage of equipment costs This edition contains more than 300 new up to date homework problems extensively tested in undergraduate courses at Purdue University and the University of Canterbury New Zealand Coverage includes New chapter

on crystallization from solution including equilibrium chemical purity crystal size distribution and pharmaceutical applications Thirteen up to date Aspen Plus process simulation labs adaptable to any simulator Eight detailed Aspen Chromatography labs Extensive new coverage of ternary stage by stage distillation calculations Fraction collection and multicomponent calculations for simple batch distillation New mass transfer analysis sections on numerical solution for variable diffusivity Mass transfer to expanding or contracting objects including ternary mass transfer Expanded coverage of pervaporation Updated Excel spreadsheets offering more practice with distillation diffusion mass transfer and membrane separation problems **Chemical Engineering Education** ,2004 **Control of Unstable Systems** R.
