Learning Python Web Penetration Testing Christian Martorella, 2016

This course will walk you through the web application penetration testing methodology showing you how to write your own tools with Python for every main activity in the process. It will show you how to test for security vulnerabilities in web applications just like security professionals and hackers do. The course starts off by providing an overview of the web application penetration testing process and the tools used by professionals to perform these tests. Then we provide an introduction to HTTP and how to interact with web applications using Python and the Requests library. Then will follow the web application penetration testing methodology and cover each section with a supporting Python example. To finish off we test these tools against a vulnerable web application created specifically for this course.
