**Mathematical Structures for Computer Science** Judith L. Gersting, 2007 This edition offers a pedagogically rich and intuitive introduction to discrete mathematics structures It meets the needs of computer science majors by being both comprehensive and accessible [Don Pigozzi on Abstract Algebraic Logic, Universal Algebra, and Computer Science](#) Janusz Czelakowski, 2018-03-20 This book celebrates the work of Don Pigozzi on the occasion of his 80th birthday In addition to articles written by leading specialists and his disciples it presents Pigozzi s scientific output and discusses his impact on the development of science The book both catalogues his works and offers an extensive profile of Pigozzi as a person sketching the most important events not only related to his scientific activity but also from his personal life It reflects Pigozzi s contribution to the rise and development of areas such as abstract algebraic logic AAL universal algebra and computer science and introduces new scientific results Some of the papers also present chronologically ordered facts relating to the development of the disciplines he contributed to especially abstract algebraic logic The book offers valuable source material for historians of science especially those interested in history of mathematics and logic *Generic and Indexed Programming* Jeremy Gibbons, 2012-07-20 Generic programming is about making programs more widely applicable via exotic kinds of parametrization not just along the dimensions of values or of types but also of things such as the shape of data algebraic structures strategies computational paradigms and so on Indexed programming is a lightweight form of dependently typed programming constraining flexibility by allowing one to state and check relationships between parameters that the shapes of two arguments agree that an encoded value matches some type that values transmitted along a channel conform to the stated protocol and so on The two forces of genericity and indexing balance each other nicely simultaneously promoting and controlling generality The 5 lectures included in this book stem from the Spring School on Generic and Indexed Programming held in Oxford UK in March 2010 as a closing activity of the generic and indexed programming project at Oxford which took place in the years 2006 2010 **Distributed Computing and Internet Technology** Raja Natarajan, Adegboyega Ojo, 2011-01-25 This book constitutes the proceedings of the 7th International Conference on Distributed Computing and Internet Technology ICDCIT 2011 held in Bhubaneswar India in February 2011 The 18 papers presented in this volume were carefully reviewed and selected from 138 submissions In addition the book contains the full versions of 6 invited talks The papers are grouped in topical sections on distributed computing sensor networks internet technologies and applications security and bio inspired computing **Solutions Manual for Mathematical Structures for Computer Science, Second Edition** Judith L. Gersting, 1987 **Spectral and High Order Methods for Partial Differential Equations** Jan S. Hesthaven, Einar M. Rønquist, 2010-10-29 The book contains a selection of high quality papers chosen among the best presentations during the International Conference on Spectral and High Order Methods 2009 and provides an overview of the depth and breadth of the activities within this important research area The carefully reviewed

selection of the papers will provide the reader with a snapshot of state of the art and help initiate new research directions through the extensive bibliography

*Concept Invention* Roberto Confalonieri, Alison Pease, Marco Schorlemmer, Tarek R. Besold, Oliver Kutz, Ewen Maclean, Maximos Kaliakatsos-Papakostas, 2018-10-05 This book introduces a computationally feasible cognitively inspired formal model of concept invention drawing on Fauconnier and Turner's theory of conceptual blending a fundamental cognitive operation The chapters present the mathematical and computational foundations of concept invention discuss cognitive and social aspects and further describe concrete implementations and applications in the fields of musical and mathematical creativity Featuring contributions from leading researchers in formal systems cognitive science artificial intelligence computational creativity mathematical reasoning and cognitive musicology the book will appeal to readers interested in how conceptual blending can be precisely characterized and implemented for the development of creative computational systems

Pace, 2012-09-13 Mathematics plays a key role in computer science some researchers would consider computers as nothing but the physical embodiment of mathematical systems And whether you are designing a digital circuit a computer program or a new programming language you need mathematics to be able to reason about the design its correctness robustness and dependability This book covers the foundational mathematics necessary for courses in computer science The common approach to presenting mathematical concepts and operators is to define them in terms of properties they satisfy and then based on these definitions develop ways of computing the result of applying the operators and prove them correct This book is mainly written for computer science students so here the author takes a different approach he starts by defining ways of calculating the results of applying the operators and then proves that they satisfy various properties After justifying his underlying approach the author offers detailed chapters covering propositional logic predicate calculus sets relations discrete structures structured types numbers and reasoning about programs The book contains chapter and section summaries detailed proofs and many end of section exercises key to the learning process The book is suitable for undergraduate and graduate students and although the treatment focuses on areas with frequent applications in computer science the book is also suitable for students of mathematics and engineering

A Mathematical Structure for Emergent Computation Victor Korotkikh, 2014-01-17 An understanding of emergent computation requires a profound revision of the most fundamental ideas A noticeable attempt of

such a rethinking is a world view in which natural systems are seen not as separate entities but as integrated parts of a unified whole The book for the first time presents such a mathematical structure which remarkably is based on integers as the single concept As integers are considered to be the most fundamental entities irreducible to something simpler this makes the mathematical structure a final theory and thus we do not have to look for its explanation in terms of deeper concepts The book is not only applicable to models of computation and optimization but also has scientific consequences as it contributes to a rethinking of the most fundamental ideas about nature Audience The book is written at a level suitable for advanced undergraduate students and graduate students as well as research workers and practitioners in computer science information technology mathematics and physics The book is suitable as a reference or as supplementary reading material for an advanced graduate course Only a basic knowledge of calculus is required
