Homberger Vertebrate Dissection:

Vertebrate Dissection Dominique G. Homberger, Warren Franklin Walker, 2004 This classic laboratory manual offers instructions for the dissection of representative vertebrates for any vertebrate dissection course It encourages facilitates active self directed learning by students

Vertebrate Dissection Warren Franklin Walker, 1980 VERTEBRATE DISSECTION Ninth Edition provides exceptionally thorough and student tested descriptions of dissection procedures and the steps needed to find all structures It encourages and facilitates active and self directed learning by the students so that instructors can teach more effectively and efficiently The manual emphasizes dissection procedures that preserve as many structures as possible for later review of the entire specimens This approach is an excellent preparation for students who will subsequently take anatomy courses in the health and animal sciences Moreover this manual places the observed material into an evolutionary and functional context Students will understand the biological role physiology and embryonic development of each organ system and its parts and how the various organ systems have evolved over time and in different animals Organized by organ systems this text brings the anatomy alive for students by interspersing narrative text throughout and explaining how the shape and structure of an organ relates to its function and how evolutionary processes have transformed the form and function of organs Additionally the authors introduce a new feature Anatomy in Action boxes which contain interesting supplemental material that provides a broader context Some of these boxes relate to functional anatomy some make comparisons between different animals and some address general biological questions that may include comparisons to the anatomy and biology of human beings

The Biology of the Avian Respiratory System John N. Maina, 2017-04-28 The central focus of this book is the avian respiratory system The authors explain why the respiratory system of modern birds is built the way it is and works the way that it does Birds have been and continue to attract particular interest to biologists The more birds are studied the more it is appreciated that the existence of human kind on earth very much depends directly and indirectly on the existence of birds Regarding the avian respiratory system published works are scattered in biological journals of fields like physiology behavior anatomy morphology and ecology while others appear in as far afield as paleontology and geology The contributors to this book are world renowned experts in their various fields of study Special attention is given to the evolution the structure the function and the development of the lung air sac system Readers will not only discover the origin of birds but will also learn how the respiratory system of theropod dinosaurs worked and may have transformed into the avian one In addition the work explores such aspects as swallowing mechanism in birds the adaptations that have evolved for flight at extreme altitude and gas exchange in eggs It is a highly informative and carefully presented work that provides cutting edge scientific insights for readers with an interest in the respiratory biology and the evolution of birds

Reanalysis of Acrocanthosaurus atokensis, its Phylogenetic Status, and Paleobiogeographic Implications, Based on a New Specimen from Texas Jerald David Harris,1998 *Outline of Cat Anatomy* Stephen G. Gilbert,Cheralea

Gilbert,2000-01-01 The cat has been used as a subject for dissection in the study of mammalian anatomy for almost two centuries The very popular Pictorial Anatomy of the Cat by Stephen G Gilbert originally published in 1967 and now in its 12th printing has been used in countless laboratories as a guide to dissection and supplement to introductory textbooks Outline of Cat Anatomy is an abridged version of the original guide modified for practical use in one semester courses It employs anatomical terms used in human rather than veterinary anatomy and includes illustrations of human anatomy that may be compared with those of the cat especially useful for the many students who do not have access to human dissections Gilbert s earlier Pictorial Anatomy of the Cat is an excellent well illustrated dissection guide for use in courses in comparative anatomy The text is informative and accurate and instructions for dissection are clear and helpful Highly recommended Choice

Organ Development ,2019-02-21 Organ Development Volume 132 the latest release in the Current Topics in Developmental Biology series highlights new advances in the field with this new volume presenting interesting chapter written by an international board of authors This volume highlights cogent reviews of the development maintenance and regeneration repair of several organ systems from eye to kidney to the musculoskeletal system Many reviews highlight new techniques or technologies that are currently pushing the field The role of both embryonic and adult stem cells are highlighted and senior authors are all women scientists Provides the authority and expertise of leading contributors from an international board of author Presents the latest release in this series Updated release includes the latest information on organ development **Feeding** Kurt Schwenk,2000-08-03 As the first four legged vertebrates called tetrapods crept up along the shores of ancient primordial seas feeding was among the most paramount of their concerns Looking back into the mists of evolutionary time fish like ancestors can be seen transformed by natural selection and other evolutionary pressures into animals with feeding habitats as varied as an anteater and a whale From frog to pheasant and salamander to snake every lineage of tetrapods has evolved unique feeding anatomy and behavior Similarities in widely divergent tetrapods vividly illustrate their shared common ancestry At the same time numerous differences between and among tetrapods document the power and majesty that comprises organismal evolutionary history Feeding is a detailed survey of the varied ways that land vertebrates acquire food The functional anatomy and the control of complex and dynamic structural components are recurrent themes of this volume Luminaries in the discipline of feeding biology have joined forces to create a book certain to stimulate future studies of animal anatomy and behavior **Heads, Jaws, and Muscles** Janine M. Ziermann,Raul E. Diaz Jr,Rui Diogo,2019-01-23 The vertebrate head is the most complex part of the animal body and its diversity in nature reflects a variety of life styles feeding modes and ecological adaptations This book will take you on a journey to discover the origin and diversification of the head which evolved from a seemingly headless chordate ancestor Despite their structural diversity

heads develop in a highly conserved fashion in embryos Major sensory organs like the eyes ears nose and brain develop in close association with surrounding tissues such as bones cartilages muscles nerves and blood vessels Ultimately this integrated unit of tissues gives rise to the complex functionality of the musculoskeletal system as a result of sensory and neural feedback most notably in the use of the vertebrate jaws a major vertebrate innovation only lacking in hagfishes and lampreys The cranium subsequently further diversified during the major transition from fishes living in an aquatic environment to tetrapods living mostly on land In this book experts will join forces to integrate for the first time state of the art knowledge on the anatomy development function diversity and evolution of the head and jaws and their muscles within all major groups of extant vertebrates Considerations about and comparisons with fossil taxa including emblematic groups such as the dinosaurs are also provided in this landmark book which will be a leading reference for many years to come

Functional Anatomy of the Vertebrates Warren Franklin Walker, Karel F. Liem, 1994 *A Study of the Cat with Reference to Human Beings* Warren Franklin Walker, Dominique G. Homberger, 1993 **Atlas of Fish Histology** Franck Genten, Eddy Terwinghe, André Danguy, 2009 Many books emphasize the pathological histology of fish but this volume fills a gap in the literature by focusing on normal fish histology A general reference guide it provides an extensive set of histological images of fish discussing approximately 40 species The book presents histology as a discipline including its methodology and techniques and its goals of investigating the structure and function of tissue samples By histologically examining the normal physiology of fish tissue scientists can gain insight into signs of disease not easily recognized on gross examination **Functional Anatomy of the Vertebrates** Karel F. Liem, Warren Franklin Walker, 2001 This book introduces students to the groups of vertebrates and explores the anatomical evolution of vertebrates within the context of the functional interrelationships of organs and the changing environments to which vertebrates have adapted The text contains all of the material taught in classic comparative anatomy courses but integrates this material with current research in functional anatomy This integration adds a new dimension to our understanding of structure and helps students understand the evolution of vertebrates Sharks, Skates, and Rays William C. Hamlett, 1999-05-21 Successor to the classic work in shark studies *The Elasmobranch Fishes* by John Franklin Daniel first published 1922 revised 1928 and 1934 *Sharks Skates and Rays* provides a comprehensive and up to date overview of elasmobranch morphology Coverage has been expanded from anatomy to include modern information on physiology and biochemistry The new volume also provides equal treatment for skates and rays The authors present general introductory material for the relative novice but also review the latest technical citations making the book a valuable primary reference resource More than 200 illustrations supplement the text

Functional Anatomy of the Integument and Subcutaneous Structures of the Head, Neck and Thorax of the Domestic Turkey, Meleagris Gallopavo Kumudini Nishantha De Silva, 1995 *Fieldiana*, 1999 **Developments in X-ray Tomography**, 2006 *Mammalia*, 2002 How the Anteater Got Its Tongue Karen Zich Reiss, 1997 *Mechanism*
