Marine Automation :

History and Technological Improvements of Marine Automation J. C. Culbertson, Society of Naval Architects and Marine Engineers, 1972 In the fall of 1963 the United States Maritime Commission and the Cleveland Cliffs Iron Company entered into an agreement to upgrade the single powered boiler of the S S William G Mather so that the boiler would operate completely automatic from the engine room For this upgrading the Bailey Meter Company supplied the combustion and feedwater controls and the burner management system In the spring of 1964 the American Shipbuilding Company installed the equipment at the Lorain Shipyard The engineering design features and philosophy of operation will be briefly discussed along with the technological improvements since this installation

Ship Propulsion Systems Serena Vaughn, AI, 2025-03-12 Ship Propulsion Systems explores the fascinating engineering behind how ships traverse the oceans from traditional sails to modern engines Global trade relies heavily on efficient and reliable ship propulsion making the understanding of these systems crucial Interestingly the resurgence of sail technology offers a sustainable approach to reduce carbon emissions and improve fuel efficiency contrasting with the more established but environmentally impactful engine technologies The book progresses logically beginning with fundamental principles of naval architecture and hydrodynamics before delving into various engine types including diesel gas turbines and electric propulsion It then explores integrating sail technology into modern ships and culminates with a discussion of hybrid propulsion systems and alternative fuels Understanding the mechanics of marine engines such as internal combustion requires a grasp of mechanical engineering principles This book stands out by comprehensively covering both conventional and alternative propulsion methods crucial for addressing the challenges of the 21st century maritime industry It adopts an analytical approach presenting information clearly and concisely making complex concepts accessible to a broad audience including students and professionals in mechanical engineering naval architecture and marine engineering
