Mathematical Methods in Chemical Engineering Arvind Varma, Massimo Morbidelli, 2008 *Computational Methods in Chemical Engineering with Maple* Ralph E. White, Venkat R. Subramanian, 2010-02-06 This book presents Maple solutions to a wide range of problems relevant to chemical engineers and others Many of these solutions use Maple's symbolic capability to help bridge the gap between analytical and numerical solutions The readers are strongly encouraged to refer to the references included in the book for a better understanding of the physics involved and for the mathematical analysis This book was written for a senior undergraduate or a first year graduate student course in chemical engineering Most of the examples in this book were done in Maple 10 However the codes should run in the most recent version of Maple We strongly encourage the readers to use the classic worksheet mws option in Maple as we believe it is more user friendly and robust In chapter one you will find an introduction to Maple which includes simple basics as a convenience for the reader such as plotting solving linear and nonlinear equations Laplace transformations matrix operations do loop and while loop Chapter two presents linear ordinary differential equations in section 1 to include homogeneous and nonhomogeneous ODEs solving systems of ODEs using the matrix exponential and Laplace transform method In section two of chapter two nonlinear ordinary differential equations are presented and include simultaneous series reactions solving nonlinear ODEs with Maple's dsolve command stop conditions differential algebraic equations and steady state solutions Chapter three addresses boundary value problems

The book covers 13 disciplines including civil, architectural, mechanical, electrical, electronics, control, marine, and nuclear engineering, enabling readers to become familiar with procedures in fields apart from their own. The third edition features a major new section on environmental engineering plus increased emphasis on environmental factors in the other 12 disciplines.

Current Index to Journals in Education, 1980 **Chemical Engineering Dynamics** John Ingham, 1994. In this book, the reader is guided through the complex study of dynamic chemical engineering systems by the unique combination of a simplified presentation of the fundamental theory (Part 1) and direct hands-on computer experimentation with the provision of 85 accompanying computer-based simulation examples (Part 2, supplied on diskette). The ISIM digital simulation language is very simple to use, and its powerful interactive nature enables the readers to create their own simulations based on their own specific problems. This powerful dynamic ISIM software is ready to run on any DOS personal computer. The treatment employed in this book is well tried and tested, based on over 20 years of experience in teaching an

international post experience course Whether for the teacher the student the chemist or engineer this book serves as the key to a greater understanding of chemical engineering dynamics through the fun and enjoyment of active learning
