Target Costing and Value Engineering Robin Cooper, 2017-10-19 What would happen if everyone in your company followed a disciplined approach to cost reduction Go ahead imagine it What would it look like How can it be done The answer smart cost management Effective cost management must start at the design stage As much as 90-95% of a product's costs are added in the design process That is why effective cost management programs focus on design and manufacturing The primary cost management method to control cost during design is a combination of target costing and value engineering Target Costing Objectives Identify the cost at which your product must be manufactured at if it is to earn its profit margin at its expected target selling price Break the target cost down to its component level and have your suppliers find ways to deliver the components they sell you at the set target prices while still making adequate returns Value Engineering The connection to function An organized effort and team based approach to analyze the functions of goods and services that the design stage and find ways to achieve those functions in a manner that allows the firm to meet its target costs The result Added value for your company development costs on line with added value for your company development costs on line with selling prices and added value for your customer higher quality products that meet possibly even exceed customer expectations

**Management** Dr. Yenda Srinivasa Rao, 2023-11-07 The responsibility of production management is to establish and cultivate a correlation between the production capability of an organization and the demands of the market. It guarantees the achievement of the dual organizational goals of productivity and customer satisfaction. Inventory management and planning, organizing, directing, and controlling are all that are required to achieve these two goals. Production management encompasses the systematic coordination and control of production factors including personnel, equipment, materials, finances, and management with the ultimate goal of ensuring customer satisfaction with the final product. Production and Operation Management is concerned with the operational implementation of the business concept in order to generate products and services. Additionally, they are indispensable in both manufacturing and service-oriented organizations. The primary aim of this endeavor is to utilize the organization's resources in order to generate market-ready products and services. Adding value is what the production function strives to achieve. Whether it be products or services, the objective is to develop an entity that will fortify the organization's rapport with its clientele. However, this cannot be accomplished solely by the production division. Additionally, marketing professionals play a significant function in this. Given their role as the distributors of the product to prospective purchasers, they ought to possess the ability to communicate customer or consumer preferences to the production department. As wage earners, the application of VE is helping American industry maintain its economic position in world markets, thereby protecting our jobs and careers. As taxpayers, the Department of Defense (DOD) VE program has come to the defense of the Defense dollar with audited savings to us of over 1.1 billion for fiscal years 1963 through 1966. As consumers, we today purchase many products at not only lower prices but with greater value as well, because the manufacturer of those products is applying VE as an effective management tool. And all of these VE economic benefits have come rapidly. As recently as 1960, the application of this cost-saving technique is dated back to 1947, wherever the technique had been intelligently and open-mindedly applied, it had been successful. With

this acceptance and practice of the methodology have come rapid developments in the state of the art and in the point of its application to the product cycle What was once considered second look Value Analysis whereby the methodology was applied only after the entity of the product was well established began moving back in the product development cycle for a first look into the design aspects of the product Thus what was originally christened Value Analysis synonymously became known as Value Engineering VE a confirmation that served to justifiably raise the status of and respect for the technique Value Engineering is therefore no longer on trial It has proved itself repeatedly But in spite of its name its success has not come as a technological technique but as a potent economic tool for management Why Because the record shows without reservation that the technique must have the rigorous and unqualified backing of management Where VE has received this kind of support management has reaped a return on investment in the order of 15 | This kind of performance management understands
