Dalzell, 2012-12-06 All areas of industry are facing increasing pressure from governments and consumers to be more environmentally aware The food industry is no exception and an increasing number of companies have made the decision to implement an environmental policy These organisations will benefit from this book which has been written to provide a broad but detailed introduction to the topic of environmental issues and their cost implications to the food industry Throughout the text the authors have approached the subject from a practical angle and have borne in mind

the environmental production or site manager who is grappling with the problem of how to implement such a policy This book begins by considering the raw materials that are used in the food industry whether derived from animals fruit and vegetables or the products of genetic engineering as may increasingly be the case in the future Environmental and cost considerations of food processing operations are then examined encompassing energy conservation and the control of air noise and water pollution all topics that are uppermost in the priorities of the environmental manager The finished food product also has an impact on its environment and so the storage distribution and packaging of foods post food factory is discussed in detail Finally the principles involved in management accounting for food industry environmental issues are highlighted All the authors of this book are respected experts in their chosen field each of whom could have written a complete book on their subject

Setting Performance Targets Carolyn Stringer, 2012-01-13 Targets are an important part of our work life whether we are setting them or meeting them There is a science to target setting Unfortunately the behavioral impact of target setting on performance is underestimated This can lead to serious consequences such as game playing overcharging customers or demotivating competent managers This book will help you fill the gap in target setting for performance The pivotal issue in target setting is that it is an art as well as a science Perhaps more of an art requiring a balance between the psychologies of the people taking initiatives the science of estimating probabilities and aligning with strategies coupled with the motivational effects of incentives You will also be introduced to some of the important methods in target setting such as forecasting sensitivity analysis and probability analysis all of which include practical examples to show how these techniques can be directly applied In the end you will learn how interrelated the various parts of organizational activities are and how they impact on each other which is important since target setting must include an understanding of the organizational context e.g people competitive environment structure strategy as well as the impact of incentive compensation and information flows
