Human Intelligence and Medical Illness R. Grant Steen, 2009-09-16 As critics will note psychometric tests are deeply flawed Person to person differences in performance on a psychometric test are not informative about many things of great interest An intelligence quotient IQ cannot characterize creativity or wisdom or artistic ability or other forms of specialized knowledge An IQ test is simply an effort to assess an aptitude for success in the modern world and individual scores do a mediocre job of predicting individual successes In the early days of psychology tests of intelligence were cobbled together with little thought as to validity instead the socially powerful sought to validate their power and the prominent to rationalize their success In recent years we have obated many of the objections to IQ that were so forcefully noted by Stephen Jay Gould in The Mismeasure of Man Nevertheless IQ tests are still flawed and those flaws are hereby acknowledged in principle Yet in the analysis that follows individual IQ test scores are not used rather average IQ scores are employed In many cases though not all an average IQ is calculated from a truly enormous sample of people The most common circumstance for such large scale IQ testing is an

effort to systematically sample all men of a certain age to assess their suitability for service in the military Yet it is useful and prudent to retain some degree of skepticism about the ability of IQ tests to measure individual aptitudes
