(1) S is the separation between the two bends measured from the downstream end of the curved portion of the upstream end to the upstream end of the curved portion of the downstream bend.

(2) This is not a good upstream installation; a flow conditioner should be used where possible.

(3) Column A for each fitting gives lengths corresponding to "zero additional uncertainty" values (see 6.2.3).

(4) Column B for each fitting gives lengths corresponding to "0.5% additional uncertainty" values (see 6.2.4).

(5) The straight length in Column A gives zero additional uncertainty; data are not available for shorter straight lengths which could be used to give the required straight lengths for Column B.
