Design and Implementation of Total Quality Management in a Civil Engineering Squadron Robert M. Wertz, AIR FORCE INST OF TECH WRIGHT-PATTERSON AFB OH SCHOOL OF SYSTEMS AND LOGISTIC S., Air Force Institute of Technology (U.S.), 1989 This thesis examines and documents Total Quality Management TQM in a Civil Engineering squadron to improve quality and productivity of services and goods produced It was meant to provide a model of TQM implementation as well as lessons learned which would be useful to any other governmental organization who desires organizational quality and productivity improvements In addition to the case study a quality questionnaire survey was administered to employees at all levels to determine quality perception changes which occurred due to the TQM implementation It was found that out of 6 main categories measuring quality 5 of the 6 showed statistically significant improvements in the employees perceptions of organizational quality The only category which failed to demonstrate an increase was internal and external quality results however this could have been expected since the TQM process improvements have improved quality and efficiency of processes but not enough time has passed to actually observe significant changes in product quality TQM stresses employee participation something that Japan has been successful with for decades while actual participative management is still in its infancy in American industrial and governmental functions This study reported several gains from employee participation in improving all work processes Indeed tapping the creative intelligence and expertise of hundreds throughout a field demonstrated the potential to vastly streamline processes increasing the quality of goods and services produced by the company Quality assurance edc

Project Quality Management Sui Pheng Low, Joy Ong, 2014-04-29 The book presents the development of the Construction Quality Assessment System CONQUAS Singapore s de facto quality performance measurement system explains the application of the Quality Management System QMS to manage CONQUAS and identifies 33 critical success factors CSFs for achieving high CONQUAS scores Through CONQUAS the reader benefits from understanding how the Singapore government developed and implemented the first objective system for measuring what many building professionals have perceived to be elusive quality standards in the construction industry The book presents both the theoretical concepts as well as the practical aspects to achieving strategic Project Quality Management that is anchored on the CSFs to building best practices To realistically reflect the practical aspects and challenging issues faced by stakeholders in the construction industry questionnaire surveys were conducted with building

professionals to distinguish the importance level and extent of adoption of the 33 CSFs identified from a comprehensive review of the extant literature in influencing and affecting the achievement of high CONQUAS scores. These were further anchored by in depth interviews with quality experts in the Singapore construction industry to provide a better understanding of issues relating to strategic Project Quality Management. Collectively the empirical findings collated from the building professionals suggest that while the CSFs identified are known tenets of quality these were still not being followed in their totality. A further case study was conducted through a formal set of in depth interviews with the quality assurance team of a construction company who has direct involvement before during and after their tremendous improvements in the CONQUAS scores attained. The strength of this book therefore represents a true account and reflections of real life practices and experiences in the construction industry for contractors quality managers and policy makers to learn from. Although the context of this book relates to the Singapore experience the lessons and recommendations are equally relevant and applicable to the global construction industry in both the developing and developed countries whose stakeholders in both the public and private sectors wish to understand how CONQUAS works and how the CSFs identified can likewise be implemented for strategic Project Quality Management to building best practices. The book is therefore of interests to researchers academia and practitioners in the construction industry as well as in other sectors of the economy in Singapore and other countries where learning points may be used for enhancing project quality management for buildings.
