ITS Sensors and Architectures for Traffic Management and Connected Vehicles Lawrence A. Klein, 2017-08-07 An intelligent transportation system ITS offers considerable opportunities for increasing the safety efficiency and predictability of traffic flow and reducing vehicle emissions Sensors or detectors enable the effective gathering of arterial and controlled access highway information in support of automatic incident detection active transportation and demand management traffic adaptive signal control and ramp and freeway metering and dispatching of emergency response providers As traffic flow sensors are integrated with big data sources such as connected and cooperative vehicles and cell phones and other Bluetooth enabled devices more accurate and timely traffic flow information can be obtained The book examines the roles of traffic management centers that serve cities counties and other regions and the collocation issues that ensue when multiple agencies share the same space It describes sensor applications and data requirements for several ITS strategies sensor technologies sensor installation initialization and field testing procedures and alternate sources of traffic flow data The book addresses concerns related to the introduction of automated and connected vehicles and the benefits that systems engineering and national ITS architectures in the US Europe Japan and elsewhere bring to ITS Sensor and data fusion benefits to traffic management are described while the Bayesian and Dempster Shafer approaches to data fusion are discussed in more detail ITS Sensors and Architectures for Traffic Management and Connected Vehicles suits the needs of personnel in transportation institutes and highway agencies and students in undergraduate or graduate transportation engineering courses

Highway Traffic Monitoring and Data Quality Michael Dalglish, 2008 This unique resource gives you a hands on understanding of the latest sensors processors and communication links for everything from vehicle counts to urban congestion measurement Moreover you learn statistical techniques for quantifying data accuracy and reducing uncertainty in both current system state assessments and future system state forecasts

Advances in Wireless Sensors and Sensor Networks Subhas Chandra Mukhopadhyay, Henry Leung, 2010-04-16 In recent times wireless sensors and sensor networks have become a great interest to research scientific and technological community Though the sensor networks have been in place for more than a few decades now the wireless domain has opened up a whole new application spaces of sensors Wireless sensors and sensor networks are different from traditional wireless networks as well computer networks and therefore pose more challenges to solve such as limited energy restricted life time etc This book intends to illustrate and to collect recent advances in wireless sensors and sensor networks not as an encyclopedia but as clever support for scientists students and researchers in order to stimulate exchange and discussions for further developments

International Conference on Sensors and Control Techniques (ICSC 2000) Desheng Jiang,Anbo Wang,2000 This volume contains the proceedings of the International Conference on Sensors and Control Techniques held in Wuhan China on 19 21 June 2000 *National Traffic Data Acquisition Technologies Conference* ,1990 *National Traffic Data Acquisition Conference (NATDAC '96)* ,1996 *Citizens' Participation in Urban Transformations* Chiara Scanagatta,2023-07-11 Humanity has always seen a close relationship between the place of living and the ways of life Today the quality of life certainly improves if places of living are attentive to the ever changing needs of communities The space of the city should not be static but dynamic and flexible The aim of this work is therefore to pay more and more attention to the in depth studies on which many architectural scholars are working today necessary for the fabbricato to be more and more responsive to the population that uses it both in the sense of the physical spaces and the materials that guarantee its quality and efficiency It is a theme to which architects are paying plenty of attention because it is becoming increasingly urgent also in view of the

European Union's expectations on the matter to investigate the urban and building components and the effects they produce in terms of e.g. quality of materials, functionality of spaces, living habits of the population, proximity of services. This work arose from an experience of personal collaboration in a European project of innovative participatory design carried out in Verona Sud during the PhD period. Subsequently, it was analysed and examined in depth, which theoretical and operational aspects actually make it possible to implement urban transformations that link the relations between the environment and quality of life. In this large field, it therefore becomes predominant to re-propose the centrality of attention to the community's expectations, ways of living, decision-making systems, techniques used, knowledge and understanding of objective data on the environment and thus to overcome common stereotypes on all these issues.
