A software engineer organizer - new special solution A. Юрков,А. Хитёв,2020-06-02 Issues which make engineers choose and use work time organizing systems are reviewed in this article In addition an overview of modern applications from this segment is provided and a notes system is proposed as a simple and effective tool to increase workflow effectiveness And finally requirements model and development principles for an application to solve all these issues are described The application was developed on the basis of the Spring Boot framework with partial use of the Domain Driven Development ideas It has a good level of code coverage by autotests due to using the Test Driven Development For posting of source codes in the Internet the GitHub repository and the free open source software GPL v3 license have been chosen The developed organizer helps to avoid waste of time for searching old data in case of work resumption under tickets suspended some time ago due to systematization of all required information files and sub tasks Regular using of the organizer makes it possible to increase efficiency of a software engineer s and the whole development team s work through minimization of time taken by routine operations connected with search for and use of project related information

Codecharts Amnon H. Eden,2011-04-11 NEW LANGUAGE VISUALIZES PROGRAM ABSTRACTIONS CLEARLY AND PRECISELY Popular software modelling notations visualize implementation minutiae but fail to scale to capture design abstractions and to deliver effective tool support Tailored to overcome these limitations Codecharts can elegantly model roadmaps and blueprints for Java C and C programs of any size clearly precisely and at any level of abstraction More practically significant productivity gains for programmers using tools supporting Codecharts have been demonstrated in controlled experiments Hundreds of figures and examples in this book illustrate how Codecharts are used to Visualize the building blocks of object oriented design Create bird s eye

roadmaps of large programs with minimal symbols and no clutter Model blueprints of patterns frameworks and other design decisions Be exactly sure what diagrams claim about programs and reason rigorously about them Tools supporting Codecharts are also shown here to Recover design from plain Java and visualize the program s roadmap Verify conformance to design decision with a click of a button This classroom tested book includes two main parts Practice Part I offers experienced programmers software designers and software engineering students practical tools for representing and communicating object oriented design It demonstrates how to model programs patterns libraries and frameworks using examples from JDK Java 3D JUnit JDOM Enterprise JavaBeans and the Composite Iterator Factory Method Abstract Factory and Proxy design patterns Theory Part II offers a mathematical foundation for Codecharts to graduate students and researchers studying software design modelling specification and verification It defines a formal semantics and a satisfies relation for design verification and uses them to reason about the relations between patterns and programs e g java awt implements Composite and Factory Method is an abstraction of Iterator

Intelligent Computer Mathematics Jacques Carette, Lucas Dixon, Claudio Sacerdoti Coen, Stephen Watt, 2009-07-06 As computers and communications technology advance greater opportunities arise for intelligent mathematical computation While computer algebra automated deduction and mathematical publishing each have long and successful histories we are now seeing increasing opportunities for synergy among them The Conferences on Intelligent Computer Mathematics cicm 2009 is a collection of co located meetings allowing researchers and practitioners active in these related areas to share recent results and identify the next challenges The specific areas of the cicm conferences and workshops are described below but the unifying theme is the computerized handling of mathematical knowledge The successful formalization of much of mathematics as well as a better understanding of its internal structure makes mathematical knowledge in many ways more tractable than general knowledge as traditionally treated in artificial intelligence Similarly we can also expect the problem of effectively using mathematical knowledge in automated ways to be much more tractable This is the goal of the work in the cicm conferences and workshops In the long view solving the problems addressed by cicm is an important milestone in formulating the next generation of mathematical software
