# Three Theories of the Solar System

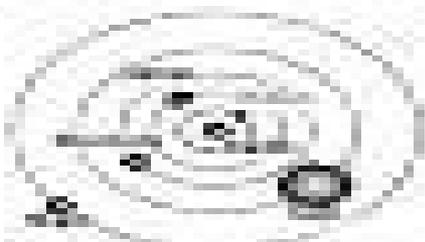

Compare and contrast the three theories of the formation of the solar system.

In the geocentric theory, the Earth is at the center of the solar system. The sun, moon, and planets revolve around the Earth. This theory was widely accepted for many centuries.

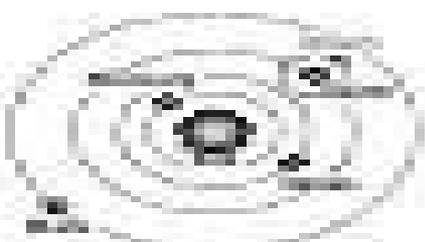

During the 16th century, Copernicus proposed the heliocentric theory, which states that the sun is at the center of the solar system and the planets revolve around it. This theory was initially rejected but later gained acceptance.

In the 18th century, Laplace proposed the nebular theory, which suggests that the solar system formed from a rotating cloud of gas and dust. This theory is widely accepted today.

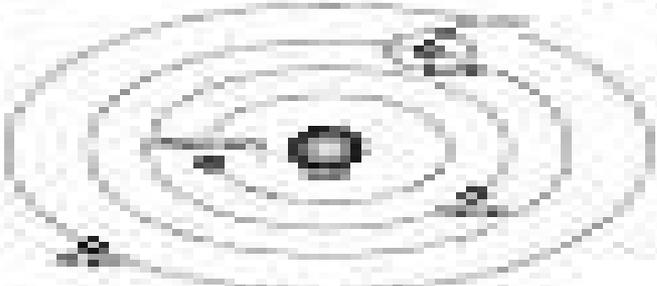

The nebular theory explains the formation of the solar system as a result of the collapse of a molecular cloud. This process led to the formation of a protostar, which eventually became the sun.
