Image Processing and Jump Regression Analysis

Peihua Qiu, 2005-05-06 The first text to bridge the gap between image processing and jump regression analysis Recent statistical tools developed to estimate jump curves and surfaces have broad applications specifically in the area of image processing Often significant differences in technical terminologies make communication between the disciplines of image processing and jump regression analysis difficult In easy to understand language Image Processing and Jump Regression Analysis builds a bridge between the worlds of computer graphics and statistics by addressing both the connections and the differences between these two disciplines The author provides a systematic analysis of the methodology behind

nonparametric jump regression analysis by outlining procedures that are easy to use simple to compute and have proven statistical theory behind them Key topics include Conventional smoothing procedures Estimation of jump regression curves Estimation of jump location curves of regression surfaces Jump preserving surface reconstruction based on local smoothing Edge detection in image processing Edge preserving image restoration With mathematical proofs kept to a minimum this book is uniquely accessible to a broad readership It may be used as a primary text in nonparametric regression analysis and image processing as well as a reference guide for academicians and industry professionals focused on image processing or curve surface estimation
