engineering information and communication technology business and healthcare **PROJECT NPA. NEURODIDACTICS OF PERFORMING ARTS** Maria Simona Morosin,2018-12-17 This monograph summarises the research conducted for the project NPA which received funding from the European Union s Horizon 2020 research and innovation program under the Marie Skłodowska Curie grant agreement N 660495 It explores the findings from cognitive neuroscience research relevant to the application of drama and performing teaching techniques in education such as the role of perception and memory emotions introspection and embodiment in learning as well as the development of motivation and aesthetic engagement to give a neurobiological account of language learning through performative pedagogies Process drama a performative methodology is described to illustrate how multi sensory learning helps not only the process of language learning but also creativity innovation and intercultural communication **Closed Loop Neuroscience** Ahmed El Hady,2016-09-08 Closed Loop Neuroscience addresses the technical aspects of closed loop neurophysiology presenting the implementation of these approaches spanning several domains of neuroscience from cellular and network neurophysiology through sensory and motor systems and then clinical therapeutic devices Although closed loop approaches have long been a part of the neuroscientific toolbox these techniques are only now gaining popularity in research and clinical applications As there is not yet a comprehensive methods book addressing the topic as a whole this volume fills that gap presenting state of the art approaches and the technical advancements that enable their application to different scientific problems in neuroscience Presents the first volume to offer researchers a comprehensive overview of the technical realities of employing closed loop techniques in their work Offers application to in vitro in vivo and hybrid systems Contains an emphasis on the actual techniques used rather than on specific results obtained Includes exhaustive protocols and descriptions of software and hardware making it easy for readers to implement the proposed methodologies Encompasses the clinical neuroprosthetic aspect and how these systems can also be used to contribute to our understanding of basic neurophysiology Edited work with chapters authored by leaders in the field from around the globe the broadest most expert coverage available **The Autoimmune Brain** David S. Younger,2019-11-10 There are millions of people who experience issues related to brain health depression attention issues anxiety forgetfulness fatigue and even chronic pain yet can t figure out what s causing their problems and can t find any relief They may have seen a myriad of doctors many of whom do not take their complaints seriously or worse turn to the easy often inappropriate fix of antidepressants or anti anxiety medications Traditional medications supplements or other therapies haven t worked No matter what their age from children to teens or seniors people and their loved ones are frustrated scared and confused by their continued poor health Countless others display severe psychiatric symptoms that seem to come out of nowhere ranging from tics obsessive compulsive behaviors and anxiety to depression bipolar like mood swings and even borderline personality disorder and suicidal ideas Sometimes the people affected are the only ones that notices a change to the way they think or feel and they suffer in silence Or they reach out to

try to get help and are all too frequently misdiagnosed David Younger a world renowned physician provides relief to these patients and their families His diagnostic techniques and treatment protocols will help readers identify the true cause of their symptoms and put them on a clear path to healing so they no longer feel unbalanced out of control forgetful and exhausted The Autoimmune Brain connects common brain health symptoms to the changes in the immune system and particularly bacterial viral and parasitic infections Younger explains his groundbreaking research and adds a new component how traumatic stress whether physical or emotional and genetics affects this same triad as inextricable factors in initiating disease and brain health symptoms In fact a change in personality behavior coping style and one s emotional state may be the first clue that there is a health problem brewing somewhere else in the body Readers will find new answers to troubling conditions including Alzheimer s disease Anxiety Arthritis Autism Autonomic disturbances Bacterial and viral infections Bipolar Disorder Cancer Celiac disease and gluten intolerances Chronic Fatigue Syndrome now referred to as Systemic Exertion Intolerance Disease Chronic Pain Dementia Depression Endocrine Disorders Immune modulatory therapy using IVIg Lyme disease and co infections Mast cell activation syndrome Medical cannabis Obsessive Compulsive Disorder Orthostatic hypotension Peripheral Neuropathy Porphyria Post Traumatic Stress Disorder and Postural orthostatic tachycardia
