E. T. Jaynes: Papers on Probability, Statistics and Statistical Physics Edwin T. Jaynes,1983-01-31 The first six chapters of this volume present the author's predictive or information theoretic approach to statistical mechanics in which the basic probability distributions over microstates are obtained as distributions of maximum entropy. These are distributions that are most non-committal with regard to missing information among all those satisfying the macroscopically given constraints. There is then no need to make additional assumptions of ergodicity or metric transitivity; the theory proceeds entirely by inference from macroscopic measurements and the underlying dynamical assumptions. Moreover, the method of maximizing the entropy is completely general and applies in particular to irreversible processes as well as to reversible ones. The next three chapters provide a broader framework at once Bayesian and objective for maximum entropy inference. The basic principles of inference including the usual axioms of probability are seen to rest on nothing more than requirements of consistency above all the requirement that in two problems where we have the same information we must assign the same probabilities. Thus statistical mechanics is viewed as a branch of a general theory of inference and the latter as an extension of the ordinary logic of consistency. Those who are familiar with the literature of statistics and statistical mechanics will recognize in both of these steps a genuine scientific revolution, a complete reversal of earlier conceptions and one of no small significance.
