

CHAPTER 3

ACCOUNTING RATIOS (RATIO ANALYSIS)

CONCEPT OF RATIO

A ratio is a relationship between two related figures, expressed mathematically. It shows numerical relationship between two figures. It is found by dividing one number by the other number.

MEANING OF ACCOUNTING RATIO

Accounting ratios are ratios calculated from financial statements.

According to J. Batty, *"the term accounting ratio is used to describe the significant relationship which exists between figures shown in a Balance Sheet, P/L A/c, in a budgetary control system or in any other part of the accounting organization"*.

Thus, accounting ratios are relationships, expressed in mathematical terms, between accounting figures which are connected with each other. In short, accounting ratios are ratios based on accounting data.

EXPRESSION (OR FORMS) OF RATIO

- 1. Proportion:** In this case, the relationship between two figures is expressed in form, denominator 1 or example, if current assets are Rs:1,50,000 and current liabilities are 50,000, The ratio between current assets and current liabilities will be 3:1 (1,50,000/ 50,000), The second term will always be 1.
