Orson Squire FOWLER, 1875      *Primary Plans* Elizabeth P. Bemis, 1911      **Index Medicus**, 2003 Vols for 1963 include as pt 2 of the Jan issue Medical subject headings      *Neural Correlates of Auditory Cognition* Yale E. Cohen, Arthur Popper, Richard R. Fay, 2012-10-20 Hearing and communication present a variety of challenges to the nervous system To be heard and understood a communication signal must be transformed from a time varying acoustic waveform to a perceptual representation to an even more abstract representation that integrates memory stores with semantic referential information Finally this complex abstract representation must be interpreted to form categorical decisions that guide behavior Did I hear the stimulus From where and whom did it come What does it tell me How can I use this information to plan an action All of these issues and questions underlie auditory cognition Since the early 1990s there has been a re birth of studies that test the neural correlates of auditory cognition with a unique emphasis on the use of awake behaving animals as model Continuing today how and where in the brain neural correlates of auditory cognition are formed is an intensive and active area of research Importantly our understanding of the role that the cortex plays in hearing has the potential to impact the next generation of cochlear and brainstem auditory implants and consequently help those with hearing impairments Thus it is

timely to produce a volume that brings together this exciting literature on the neural correlates of auditory cognition This volume compliments and extends many recent SHAR volumes such as Sound Source Localization 2005 Auditory Perception of Sound Sources 2007 and Human Auditory Cortex 2010 For example in many of these volumes similar issues are discussed such as auditory object identification and perception with different emphases in Auditory Perception of Sound Sources authors discuss the underlying psychophysics behavior whereas in the Human Auditory Cortex fMRI data are presented The unique contribution of the proposed volume is that the authors will integrate both of these factors to highlight the neural correlates of cognition behavior Moreover unlike other these other volumes the neurophysiological data will emphasize the exquisite spatial and temporal resolution of single neuron as opposed to more coarse fMRI or MEG data responses in order to reveal the elegant representations and computations used by the nervous system **British Medical Journal** ,1940
