Reproducing Kernel Hilbert Spaces In Probability And Statistics:

 Reproducing Kernel Hilbert Spaces in Probability and Statistics Alain Berlinet,Christine Thomas-Agnan,2011-06-28 The reproducing kernel Hilbert space construction is a bijection or transform theory which associates a positive definite kernel gaussian processes with a Hilbert space offunctions Like all transform theories think Fourier problems in one space may become transparent in the other and optimal solutions in one space are often usefully optimal in the other The theory was born in complex function theory abstracted and then accidently injected into Statistics Manny Parzen as a graduate student at Berkeley was given a strip of paper containing his qualifying exam problem It read reproducing kernel Hilbert space In the 1950 s this was a truly obscure topic Parzen tracked it down and internalized the subject Soon after he applied it to problems with the following fla vor consider estimating the mean functions of a gaussian process The mean functions which cannot be distinguished with probability one are precisely the functions in the Hilbert space associated to the covariance kernel of the processes Parzen s own lively account of his work on re producing kernels is charmingly told in his interview with H Joseph Newton in Statistical Science 17 2002 p 364 366 Parzen moved to Stanford and his infectious enthusiasm caught Jerry Sacks Don Ylvisaker and Grace Wahba among others Sacks and Ylvis aker applied the ideas to design problems such as the following Sup pose XdO **Reproducing Kernel Hilbert Spaces in Probability and Statistics** Alain Berlinet,Christine Thomas-Agnan,2011-04-11 The book covers theoretical questions including the latest extension of the formalism and computational issues and focuses on some of the more fruitful and promising applications including statistical signal processing nonparametric curve estimation random measures limit theorems learning theory and some applications at the fringe between Statistics and Approximation Theory It is geared to graduate students in Statistics Mathematics or Engineering or to scientists with an equivalent level *Detection of Random Signals in Dependent Gaussian Noise* Antonio F. Gualtierotti,2015-12-15 The book presents the necessary mathematical basis to obtain and rigorously use likelihoods for detection problems with Gaussian noise To facilitate comprehension the text is divided into three broad areas reproducing kernel Hilbert spaces Cram r Hida representations and stochastic calculus for which a somewhat different approach was used than in their usual stand alone context One main applicable result of the book involves arriving at a general solution to the canonical detection problem for active sonar in a reverberation limited environment Nonetheless the general problems dealt with in the text also provide a useful framework for discussing other current research areas such as wavelet decompositions neural networks and higher order spectral analysis The structure of the book with the exposition presenting as many details as necessary was chosen to serve both those readers who are chiefly interested in the results and those who want to learn the material from scratch Hence the text will be useful for graduate students and researchers alike in the fields of engineering mathematics and statistics **Advanced Topics in Mathematical Analysis** Michael Ruzhansky,Hemen Dutta,2019-01-08 Advanced Topics in Mathematical Analysis is aimed at researchers graduate students and educators with
