Using the Engineering Literature Bonnie A. Osif, 2006-08-23 The field of engineering is becoming increasingly interdisciplinary and there is an ever growing need for engineers to investigate engineering and scientific resources outside their own area of expertise However studies have shown that quality information finding skills often tend to be lacking in the engineering profession Using the Engineerin Using the Engineering Literature, Second Edition Bonnie A. Osif, 2011-08-09

With the encroachment of the Internet into nearly all aspects of work and life it seems as though information is everywhere. However, there is information and then there is correct, appropriate, and timely information. While we might love being able to turn to Wikipedia for encyclopedia-like information or search Google for the thousands of links on a topic, engineers need the best information, information that is evaluated up to date and complete. Accurate, vetted information is necessary when building new skyscrapers or developing new prosthetics for returning military veterans. While the award-winning first edition of *Using the Engineering Literature* used a roadmap analogy, we now need a three-dimensional analysis reflecting the complex and dynamic nature of research in the information age. *Using the Engineering Literature, Second Edition* provides a guide to the wide range of resources available in all fields of engineering. This second edition has been thoroughly revised and features new sections on nanotechnology as well as green engineering. The information age has greatly impacted the way engineers find information. Engineers have an effect, directly and indirectly, on almost all aspects of our lives, and it is vital that they find the right information at the right time to create better products and processes. Comprehensive and up to date with expert chapter authors, this book fills a gap in the literature, providing critical information in a user-friendly format.

The contents include mathematics, astronomy, and surveying; physics, chemistry, earth sciences, palaeontology, anthropology, biology, natural history, botany, zoology, patents, and interventions; medicine, engineering, transport vehicles, agriculture, and livestock; household management, communication, chemical industry, manufactures, industries, trades, and crafts, and the building industry. *Scientific and Technical Aerospace Reports*, 1983-10. *HVAC/R Terminology: A Quick Reference Guide*, Richard Wirz, 2009-04-01.
