**Policies and Programs for Sustainable Energy Innovations** Tugrul U. Daim, Jisun Kim, Ibrahim Iskin, Rimal Abu Taha, Kevin C. van Blommestein, 2015-04-21 This volume features research and case studies across a variety of industries to showcase technological innovations and policy initiatives designed to promote renewable energy and sustainable economic development. The first section focuses on policies for the adoption of renewable energy technologies, the second section covers the evaluation of energy efficiency programs, and the final section provides evaluations of energy technology innovations. Environmental concerns, energy availability, and political pressure have prompted governments to look for alternative energy resources that can minimize the undesirable effects for current energy systems. For example, shifting away from conventional fuel resources and increasing the percentage of electricity generated from renewable resources such as solar and wind power is an opportunity to guarantee lower CO<sub>2</sub> emissions and to create better economic opportunities for citizens in the long run. Including discussions of such timely topics and issues as global warming, bio fuels, and nuclear energy, the editors and contributors to this book provide a wealth of insights and recommendations for sustainable energy innovations.
