## Creative Destruction in Emerging Markets: Privatizing Telecoms and the State

Lee W. McKnight, Paul M. Vaaler, Burkhard N. Schrage, and  
Raul L. Katz

### I. Introduction

Joseph Schumpeter's (1934; 1939; 1943) term for describing cycles of innovation, "creative destruction," focuses on technological change and its simultaneously value-enhancing as well as value-destroying consequences.<sup>1</sup> Less attention has been paid to institutional innovation—and creative destruction—though it may have even more dramatic effects on firms and markets.<sup>2</sup> Telecommunications enterprise ("telecoms") privatization worldwide provides a telling example. Here, transfer of ownership and control of hundreds of enterprises with \$ billions in asset value from state to private hands in the late twentieth century has undoubtedly induced substantial change in individual and organizational incentives and behaviors. But telecoms privatization is still relatively recent—less than 20 years old in industrialized countries and less than a decade old in many emerging markets. Where are we in terms of the institutional innovation it promises? What is the net effect in terms of value creation and destruction?

This chapter offers several counter-intuitive, but empirically derived, answers to these questions. Before offering you the reader our answers, however, we must set the stage by reviewing the relevant literature, and the conventional wisdom.

The short- to medium-term performance implications of that institutional change are currently in dispute with two theoretical models proposing different answers, but interestingly, relying on similar factors to reach those answers. What we call a "mainstream" theoretical model of enterprise privatization (e.g., Boycko et al. 1996) suggests that less state ownership and control as well as greater exposure to market forces will

E. Beesley, 1994 *Adjustment Capacity of Labour Markets of the Western Balkan Countries* ,2008 Privatisation, Competition and Regulation Stephen C. Littlechild, 2000 Austrian economists regard utilities as exceptional cases where regulation may be justified The long term aim for a public utility should be to turn as much as possible of that industry into a private competitive and unregulated industry In the short term this may mean a considerable role for regulation Price cap RPI X regulation gives better efficiency incentives to companies than traditional US regulation and passes benefits on to consumers UK style privatisation and regulation put competition at the forefront whereas traditional US regulation for the most part suppressed it In electricity competition in

generation has stimulated efficiency improvements but it is still not fully effective Big generators still set wholesale prices most of the time and the government's stricter consent policy for gas fired plant hinders entry to generation that policy is the most significant obstacle to a more competitive market Competition to supply industrial consumers has resulted in large numbers of companies switching to new suppliers and prices have fallen considerably Introducing competition to supply domestic consumers was a major logistical exercise The cost was more than justified by the lower prices and other benefits now flowing from competition Some of the changes to utility regulation now proposed by the government will not be helpful such as the qualification to the regulators duty to promote competition The next step should be a further transfer from government to consumers of control over the utilities A challenge is to find ways by which competition can substitute for regulation in remaining monopoly sectors

**The Political Economy of the Transition Process in Eastern Europe** Laszlo Somogyi, 1993 Why has industrial output fallen in Eastern Europe and is further decline inevitable What lessons can be learned from the stabilization programmes of the first two years of the post communist era Should the transitional economies privatize quickly and where do they find the missing institutions essential to the proper working of capitalism In seeking answers to these and other questions **The Political Economy of the Transition Process in Eastern**

European analyses the difficulties faced by nations attempting to move from a planned to a market economy with special emphasis on issues of macroeconomic stabilization and institutional change. Highlighting the problems confronting countries as diverse as Hungary and Kazakhstan or Bulgaria and Estonia, the contributors to this volume address issues such as how to improve the performance of both commodity and factor markets, how farming should be de-collectivized, what will soften the impact on former member republics of the dissolution of the USSR, and whether infant or senile industries should be protected during the transition process. This volume includes special studies on Bulgaria, Croatia, Estonia, Hungary, and Kazakhstan, as well as an analysis of what is happening with state-owned enterprises while they are waiting for privatization and how the acquisition of such companies by foreign investors impacts on competition. By stressing the importance of pre-existing conditions and rejecting any notion of a universally valid policy prescription, the authors recognize the urgent need to identify those losses in output which are avoidable and those which are not. Providing an analytical framework for future research as well as a wealth of valuable data, *The Political Economy of the Transition Process in Eastern Europe* will be welcomed by students, researchers, and policymakers concerned with the creation of a new agenda for the transitional economies. *Economic Policy and Growth in Central and East European Countries* Krzysztof Piech, 2003 Česká společnost na konci tisíciletí Martin Potůček, 1999
