and it remains closely linked to national security The Energy Security Paradox looks at contemporary energy security politics in the United States and China the top two energy consumers and producers Based on in depth empirical analysis it demonstrates that current energy security practices actually lead to a security paradox they produce insecurity To illustrate this it develops the energy security paradox as a framework for understanding the interconnected insecurities produced by current practices However it also goes beyond this examining resistance to current practices to highlight that we not only can do energy security differently this is already happening In the process the volume demonstrates that the value of security depends on the context Based on this The Energy Security Paradox proposes a radical reconsideration of how we approach and practice energy security
