

My Inventions

By Nikola Tesla

V. The Magnifying Transmitter

AS I review the events of my past life I realize how subtle are the influences that shape our destinies. An incident of my youth may serve to illustrate. One winter's day I managed to climb a steep mountain, to company with other boys. The snow was quiet deep and a warm southerly wind made it just suitable for our purpose. We ascended ourselves by throwing balls which would roll down a certain distance, gathering snow or ice snow, and we tried to decide how southerly to this exciting sport. Suddenly a ball was seen to go beyond the limit, rushing to enormous proportions until it became as big as a house and plunged thundering down the valley below with a force that made the ground tremble. I looked on spell-bound, incapable of understanding what had happened. For weeks afterward the picture of the avalanche was before my eyes and I wondered how anything so small could grow to such an immense size. Ever since that time the magnificence of freight actions fascinated me, and when, years later, I took up the experimental study of mechanical and electrical resonance, I was keenly interested from the very start. Possibly, had it not been for that early powerful impression, I might not have followed up the little spark I obtained with my coil and never developed my best invention, the true history of which I will tell here for the first time.

Shaping the World's Engines.

"Lionhearters" have often asked me which of countries I prize most, a few technical men, very able in their special departments, has dominated by a heroic spirit and near-richest, have asserted that excepting the industrial cause I have given to the world none of provincial men. This is a grievous mistake. A new idea need not be judged by its immediate results. My alternating system of power transmission came as a psychological movement, as a long-sought answer to prevailing

This depends on the point of view. Not

I **M**AGINE a man a century ago, held through no design and actually built a large tower with which to transmit the human voice, music, news, news and even power, and the man to use distance wherever without wires? He probably would have been long no longer at the work. So when Tesla built his famous tower on Long Island he was a hundred years ahead of his time. And finally ridiculed by one lesser day another "visionary," how was it the best was Tesla's greatness.

The genius brain of Tesla has hardly produced a more amazing wonder than this "magnifying transmitter." Contrary to popular belief his tower was not built to reduce distance, much less the wires. Tesla's system would use thousands of kilometers through the earth. He has shown experimentally how power can be sent without wires over distances from a central point. Now is there any mystery about it how he accomplishes the work. His historic U. S. patents and articles describe the method used. Tesla's Magnifying Transmitter is truly a modern lamp of Abaddon.

and also considerable resistance had to be overcome and opposing interests reconciled, as usual, the commercial introduction could not be long delayed. Now, compare this situation with that confronting my turbine, for example. One should think that so simple and beautiful an invention, possessing many features of an ideal motor, should be adopted at once and, undoubtedly, it would under similar conditions. But the prospective effect of the rotating field was apt to render worthless existing machinery; on the contrary, it was to give it additional value. The system lent itself to new enterprises as well as to improvement of the old. My turbine is an advance of a character entirely different. It is a radical departure in the sense

Here, the Magnifying Transmitter, as shown by the inventor, is shown in the form of a tower. The tower which was to be used by Tesla in his "World-Wireless" was never erected. Illustration Opposite Shows it Completed.

that its success would mean the abandonment of the antiquated types of prime movers on which billions of dollars have been spent. Under such circumstances the progress must needs be slow and perhaps the greatest impediment is encountered in the prejudicial opinions created in the minds of experts by organized opposition. Only the other day I had a disheartening experience when I met my friend and former assistant, Charles F. Scott, now professor of Electrical Engineering at Yale. I had not seen him for a long time and was glad to have an opportunity for a little chat at my office. Our conversation naturally enough drifted on my turbine and I became heated to a high degree. "Scott," I exclaimed, carried away by the vision of a glorious future, "my turbine will sweep all the best engines in the world." Scott

struck his chin and looked away thoughtfully, as though making a mental calculation. "That will make quite a pile of scrap," he said, and left with out a further word!

"Abaddon's Lamp."

These and other inventions of mine, however, were nothing more than steps forward in certain directions. In evolving them I simply fol-

lowed the intense instinct to improve the present devices without (Continued on page 148)

task of the inventor who is often misunderstood and unrewarded But he finds ample compensation in the pleasing exercises of his powers and in the knowledge of being one of that exceptionally privileged class without whom the race would have long ago perished in the bitter struggle against pitiless elements Speaking for myself I have already had more than my full measure of this exquisite enjoyment so much that for many years my life was little short of continuous rapture I am credited with being one of the hardest workers and perhaps I am if thought is the equivalent of labor for I have devoted to it almost all of my waking hours But if work is interpreted to be a definite performance in a specified time according to a rigid rule then I may be the worst of idlers Every effort under compulsion demands a sacrifice of life energy I never paid such a price On the contrary I have thrived on my thoughts In attempting to give a connected and faithful account of my activities in this story of my life I must dwell however reluctantly on the impressions of my youth and the circumstances and events which have been instrumental in determining my career Our first endeavors are purely instinctive promptings of an imagination vivid and undisciplined As we grow older reason asserts itself and we become more and more systematic and designing But those early impulses though not immediately productive are of the greatest moment and may shape our very destinies Indeed I feel now that had I understood and cultivated instead of suppressing them I would have added substantial value to my bequest to the world But not until I had attained manhood did I realize that I was an inventor This was due to a number of causes In the first place I had a brother who was gifted to an extraordinary degree one of those rare phenomena of mentality which biological investigation has failed to explain His premature death left my earth parents disconsolate I will explain my remark about my earth parents later We owned a horse which had been presented to us by a dear friend It was a magnificent animal of Arabian breed possessed of almost human intelligence and was cared for and petted by the whole family having on one occasion saved my dear father s life under remarkable circumstances My father had been called one winter night to perform an urgent duty and while crossing the mountains infested by wolves the horse became frightened and ran away throwing him violently to the ground It arrived home bleeding and exhausted but after the alarm was sounded immediately dashed off again returning to the spot and before the searching party were far on the way they were met by my father who had recovered consciousness and remounted not realizing that he had been lying in the snow for several hours This horse was responsible for my brother s injuries from which he died I witnessed the tragic scene and although so many years have elapsed since my visual impression of it has lost none of its force The recollection of his attainments made every effort of mine seem dull in comparison Anything I did that was creditable merely caused my parents to feel their loss more keenly So I grew up with little confidence in myself

My Inventions Nikola Tesla, 2021-05-07 *My Inventions* is an autobiographical account of Nikola Tesla genius inventor written at the age of 63 The content of the book was largely drawn from a series of articles that Nikola Tesla had written for *Electrical Experimenter* magazine Tesla s personal account is divided into six chapters covering different periods of his life My Early Life My First Efforts At Invention My Later Endeavors The Discovery

of the Tesla Coil and Transformer The Magnifying Transmitter and The Art of Telautomatics Tesla tells about his life how his inventions came to him and even how his inventions helped save his life He tells his encounters with famous people his brushes with death which happened more than once and also about some future ideas This autobiography provides a deeply captivating sight into Tesla s genius mind and his strange world out of time
