Strogatz,2007 **IUTAM Symposium on Laminar-Turbulent Transition and Finite Amplitude Solutions** Tom Mullin,R. R. Kerswell,2005-09-19 An exciting new direction in hydrodynamic stability theory and the transition to turbulence is concerned with the role of disconnected states or finite amplitude solutions in the evolution of disorder in fluid flows This volume contains refereed papers presented at the IUTAM LMS sponsored symposium on Non Uniqueness of Solutions to the Navier Stokes equations and their Connection with Laminar Turbulent Transition held in Bristol 2004 Theoreticians and experimentalists gathered to discuss developments in understanding both the onset and collapse of disordered motion in shear flows such as those found in pipes and channels The central objective of the symposium was to discuss the increasing amount of experimental and numerical evidence for finite amplitude solutions to the Navier Stokes equations and to set the work into a modern theoretical context The participants included many of the leading authorities in the subject and this volume captures much of the flavour of the resulting stimulating and lively discussions

Introduction to Traveling Waves Anna R. Ghazaryan,Stéphane Lafortune,Vahagn Manukian,2022-11-14 Introduction to Traveling Waves is an invitation to research focused on traveling waves for undergraduate and masters level students Traveling waves are not typically covered in the undergraduate curriculum and topics related to traveling waves are usually only covered in research papers except for a few texts designed for students This book includes techniques that are not covered in those texts Through their experience involving undergraduate and graduate students in a research topic related to traveling waves the authors found that the main difficulty is to provide reading materials that contain the background information sufficient to start a research project without an expectation of an extensive list of prerequisites beyond regular undergraduate coursework This book meets that need and serves as an entry point into research topics about the existence and stability of traveling waves Features Self contained step by step introduction to nonlinear waves written assuming minimal prerequisites such as an undergraduate course on linear algebra and differential equations Suitable as a textbook for a special topics course or as supplementary reading for courses on modeling Contains numerous examples to support the theoretical material Supplementary MATLAB codes available via GitHub *Mathematical Methods in the Earth and Environmental Sciences* Adrian Burd,2019-04-18 An accessible introduction to the mathematical methods essential for understanding processes in the Earth and environmental sciences Hydrobiological Modelling Brian J. Williams,2006 The book describes models of aquatic ecosystems ranging from lakes to estuaries to the deep ocean It provides a background in the physical and biological processes numerical methods and elementary ecosystem models It describes two of the most

widely used hydrodynamic models and presents a number of case studies The practice of modelling in management is discussed
