Theory in the "Post" Era Christian Moraru, Andrei Terian, Alexandru Matei, 2021-08-26 Shortlisted for the AATSEEL 2022 Award for Best Edited Multi Author Scholarly Volume AATSEEL is The American Association of Teachers of Slavic and East European Languages *Theory in the Post Era* brings together the work and perspectives of a group of Romanian theorists who discuss the morphings of contemporary theory in what the editors call the post era Since the Cold War s end and especially in the third millennium theorists have been exploring the aftermath and sometimes just the after of whole paradigms the crisis or passing of anthropocentrism the twilight of an entire ontological and cultural condition as well as the corresponding rise of an antagonist model of an anti meta or neo alternative with examples ranging from posthumanism and post postmodernism to post aesthetics postanalog interpretation or digicriticism post presentism post memory post or neo critique and so forth It is no coincidence the contributors to this volume argue that this post moment is also a time when theory is practiced as a world genre If theory has always been a worlded enterprise a quintessentially communal cross cultural and international project this is truer at present than ever Perhaps more than other humanist constituencies today s theorists work and belong in a theory commons that is transnational if still uneven economically politically and otherwise *Theory in the Post Era* reports the results of Romanian theory experiments that join efforts made in other places to foster a theory for the post age

cooling of LEDs and advances in heat sinks for LED assemblies *Constructal Law and the Unifying Principle of Design* Luiz A.O. Rocha, Sylvie Lorente, Adrian Bejan, 2012-12-04 Design happens everywhere whether in animate objects e g dendritic lung structures bacterial colonies and corals inanimate patterns river basins beach slope and dendritic crystals social dynamics pedestrian traffic flows or engineered systems heat dissipation in electronic circuitry This design in nature often takes on remarkably similar patterns which can be explained under one unifying Constructal Law This book explores the unifying power of the Constructal Law and its applications in all domains of design generation and evolution ranging from biology and geophysics to globalization energy sustainability and security The Constructal Law accounts for the universal tendency of flow systems to morph into evolving configurations that provide greater and easier access over time The Constructal Law resolves the many and contradictory ad hoc statements of optimality end design and destiny in nature such as minimum and maximum entropy production and minimum and maximum flow resistance and also explains the designs that are observed and copied in biomimetics Constructal Law and the Unifying Principle of Design covers the fundamentals of Constructal Theory and Design as well as presenting a variety of state of the art applications Experts from the biological physical and social sciences demonstrate the unification of all design phenomena in nature and apply this knowledge to novel designs in modern engineering such as vascularization for self healing and self cooling materials for aircraft and tree fins and cavities for heat transfer enhancement Cancer: An Integrative Approach Doru Paul, 2026-01-01 This book represents the synthesis of many current cancer theories which combined offers a novel and innovative approach in the diagnosis prevention and treatment of cancer It introduces a new and different paradigm in the diagnosis prevention and treatment of cancer by taking into account the organism as a whole which is very different from the current cellular tissular approach toward cancer In this new paradigm cancer involves dynamic interactions with the entire body and its internal milieu Focusing on these interactions will permit pre clinical cancer diagnosis and novel treatment approaches This onco holobiont model integrates most of the current malignant process models and it is intended for the use of practitioners clinicians cancer researchers and students with a particular interest in cancer The goal of this book is to inspire scientists to go beyond the current methods in the treatment of cancer and discover new paradigms Previews of Heat and Mass Transfer ,2001

Critique of Constructal Theory XueTao Cheng,2019-09-12 Constructal theory has been extensively used to analyze and optimize many different shapes and structures in both living and non living systems It is generally considered to be a law that could govern the evolutions of shapes and structures in biology physics technology and social organization Accordingly it seems that the constructal method is suitable for designing and analyzing all kinds of shapes and structures in the world However in most cases the details for its applications were not carefully checked meaning that it was often incorrectly applied and that many unreasonable or inaccurate results were provided This book systematically reviews and checks the applications of constructal theory in street design economics heat transfer optimization flow systems and explanations of natural structures and social phenomena Every detail of the models methods optimizations applications results and conclusions is analysed with careful consideration of theoretical derivations and typical examples Accordingly the problems and mistakes in the applications of the theory are directly pointed out and discussed in detail The abuse and limitation of the constructal approach are also discussed In many cases it is shown that the theory has significant flaws and is even not applicable in certain circumstances As constructal theory is widely used in the analysis and design of shapes and structures this book will be essential for scientists researchers engineers teachers postgraduates and undergraduates in the fields of structure analysis design and optimization in physics biology flow dynamics heat transfer and thermodynamics
