Blueprint Numbers Counting Book:

Blueprints Marcus du Sautoy, 2025-09-09 A stunning book a thrilling read Peter Frankopan that reveals how creative people can harness the profound and productive relationship between mathematics and the arts When Shakespeare has the Three Witches cast Macbeth's lot he uses something very weird to do it not simply eye of newt and toe of frog but the number seven And when Hamlet claims To be or not to be that is the question Shakespeare reaches for eleven For Shakespeare prime numbers were magical And he is not alone As Marcus du Sautoy showcases in *Blueprints* creativity is inseparable from mathematics The designs of Le Corbusier and Leonardo the music of Glass Bach and Debussy the wild visions of Dali the choreography of Laban the animation of Pixar all are shot through with mathematics from primes and fractals to the weirder worlds of Hamiltonian cycles and hyperbolic geometry And Du Sautoy argues that the relationship runs both ways Just as mathematics inspires new art the artistic mindset is a necessity for discovering new mathematics *Blueprints* will expand your mind but more importantly it shows how to ignite your imagination Anyone who wants to create needs this book

Rational Numbers Thomas P. Carpenter, Elizabeth Fennema, Thomas A. Romberg, 2012-10-12 Until recently there had been relatively little integration of programs of research on teaching learning curriculum and assessment However in the last few years it has become increasingly apparent that a more unified program of research is needed to acquire an understanding of teaching and learning in schools that will inform curriculum development and assessment The chapters in this volume represent a first step toward an integration of research paradigms in one clearly specified mathematical domain Integrating a number of different research perspectives is a complex task and ways must be found to reduce the complexity without sacrificing the integration The research discussed in this volume is tied together because it deals with a common content strand During the last ten years specific content domains have served as focal points for research on the development of mathematical concepts in children The areas of addition and subtraction algebra rational numbers and geometry are notable examples Whether a similar organizational structure will prevail for programs of research that integrate the study of teaching learning curriculum and assessment is an open question The perspectives presented in this volume illustrate the potential for adopting this perspective
