Introduction to Numerical Electrostatics Using MATLAB Lawrence N. Dworsky,2014-03-14

Readers are guided step by step through numerous specific problems and challenges covering all aspects of electrostatics with an emphasis on numerical procedures The author focuses on practical examples derives mathematical equations and addresses common issues with algorithms Introduction to Numerical Electrostatics contains problem sets an accompanying web site with simulations and a complete list of computer codes Computer source code listings on accompanying web site Problem sets included with book Readers using MATLAB or other simulation packages will gain insight as to the inner workings of these packages and how to account for their limitations Example computer code is provided in MATLAB Solutions Manual The first book of its kind uniquely devoted to the field of computational electrostatics *Asymmetric Electrostatic Forces and a New Electrostatic Generator* Katsuo Sakai,2010 It is well known that there are three kinds of electrostatic forces gradient force image force and the Coulomb force The gradient force acts on a non charged body that is placed in a convergence electric field Image force acts on a charged body placed nearby a conductive plate The Coulomb force acts on a charged body placed in an electric field As for the shape of these bodies only symmetric forms have been treated in the past The representative example for all three force types is globala sphere Forty years ago potential of a spherical body could be calculated In contrast today we can calculate the potential of any shape by computer simulation In this book simulation of the electrostatic force that acts on asymmetrically shaped conductors is carried out
