## **Single Page Web Applications Michael S Mikowski:**

Single Page Web Applications Michael Mikowski, Josh C. Powell, 2013-09-30 Code for most web sites mostly runs on the server. When a user clicks on a link, the site reacts slowly because the browser sends information to the server and the server sends it back again before displaying the results. With near universal availability of capable browsers and powerful hardware, the single page web application (SPA) pushes most of the code to the browser, giving users immediate results whether they're surfing at their desk or using a phone app. *Single Page Web Applications* shows how to build modern browser-based apps that take advantage of stronger client platforms and more predictable bandwidth. It covers the SPA design approach and explores new techniques like structured JavaScript and responsive design. Readers will learn to capitalize on trends like server-side JavaScript and NoSQL data stores, as well as new frameworks that make JavaScript more manageable and testable as a first-class language. **AUDIENCE** This book is for web developers, architects, and product managers who know about JavaScript, HTML, CSS, and web development basics. **ABOUT THE TECHNOLOGY** A Single Page Application (SPA) is an application delivered to the browser that does not reload the page during use. **Single Page Web Applications** Michael Mikowski, Josh Powell, 2013-09-19 Summary In *Single Page Web Applications*, you'll learn to build modern browser-based apps that take advantage of stronger client platforms and more predictable bandwidth. You'll learn the SPA design approach and then start exploring new techniques like structured JavaScript and responsive design. And you'll learn how to capitalize on trends like server-side JavaScript and NoSQL data stores, as well as new frameworks that make JavaScript more manageable and testable as a first-class language. **About this Book** If your website is a jumpy collection of linked pages, you're behind. Single page web applications are your next step: pushing UI rendering and business logic to the browser and communicating with the server only to synchronize data. They provide a smooth user experience, much like a native application. But SPAs can be hard to develop, manage, and test. *Single Page Web Applications* shows how your team can easily design, test, maintain, and extend sophisticated SPAs using JavaScript, end-to-end, without getting locked into a framework. Along the way, you'll develop advanced HTML5, CSS3, and JavaScript skills and use JavaScript as the language of the web server and the database. This book assumes basic knowledge of web development. No experience with SPAs is required. Purchase of the print book includes a free eBook in PDF, Kindle, and ePub formats from Manning Publications. **What's Inside** Design, build, and test a full-stack SPA. Best-in-class tools like jQuery, TaffyDB, Node.js, and MongoDB. Real-time web with web sockets and Socket.io. Touch controls for tablets and smartphones. Common SPA design mistakes. **About the Authors** The authors are architects and engineering managers. Michael Mikowski has worked on many commercial SPAs and a platform that processes over 100 billion requests per year. Josh Powell has built some of the most heavily trafficked sites on the web. **Table of Contents** PART 1 INTRODUCING SPAs Our first single page application Reintroducing JavaScript PART 2 SPA CLIENT Develop the Shell Add feature modules Build the Model Finish the Model and Data modules PART 3 THE SPA SERVER The web server The server database Ready to

Mark Volkmann, 2024-08-14 htmx is a library that adds logic and server interaction to HTML you get the effect of using a front end SPA framework without writing front end code Use any server side programming language and framework to build server applications with endpoints that simply return snippets of HTML Dynamically update portions of the current web page from HTTP responses Add interactivity with JavaScript and libraries such Alpine and \_hyperscript Make your apps more secure by escaping user supplied content and specifying a Content Security Policy Go beyond basic HTTP requests with WebSockets and server sent events The htmx JavaScript library gives you a new way to craft web applications The htmx approach differs significantly from that of the currently popular single page application SPA frameworks rather than write a bunch of JavaScript you simply annotate HTML elements before you send them to the browser The resulting code is easier to understand and modify and because it downloads less to the browser and doesn t need JSON creation and parsing you ll find it performs better too Rethink web application design write code in any language that simply responds to requests with htmx snippets Dynamically update portions of the current web page directly from the server Implement common patterns such as lazy loading input validation CSS transitions active search optimistic updates pagination infinite scroll polling and click to edit Add interactivity with JavaScript and libraries such as Alpine and \_hyperscript Use the htmx JavaScript API to simplify DOM operations Make your web apps more secure escape user supplied content use Subresource Integrity hashes and

enforce a Content Security Policy Go beyond the basic HTTP request response pattern with WebSockets and server sent events Discover a simpler way to implement web applications that emphasizes web fundamentals What You Need A modern web browser and the ability to build and run a local HTTP server using the server side language and framework of your choice The code examples are fully compatible with htmx 2 0
