planning or project management Understanding time oriented data via visual representations enables us to learn from the past in order to predict plan and build the future This second edition builds upon the great success of the first edition It maintains a brief introduction to visualization and a review of historical time oriented visual representations At its core the book develops a systematic view of the visualization of time oriented data Separate chapters discuss interaction techniques and computational methods for supporting the visual data analysis Many examples and figures illustrate the introduced concepts and techniques So what is new for the second edition First of all the second edition is now published as an open access book so that anyone interested in the visualization of time and time oriented data can read it Second the entire content has been revised and expanded to represent state of the art knowledge The chapter on interaction support now includes advanced methods for interacting with visual representations of time oriented data The second edition also covers the topics of data quality as well as segmentation and labeling The comprehensive survey of classic and contemporary visualization techniques now provides more than 150 self contained descriptions accompanied by illustrations and corresponding references A completely new chapter describes how the structured survey can be used for the guided selection of suitable visualization techniques For the second edition our TimeViz Browser the digital pendant to the survey of visualization techniques received a major upgrade It includes the same set of techniques as the book but comes with additional filter and search facilities allowing scientists and practitioners to find exactly the solutions they are interested in

The FORA Framework Edy Portmann,2012-12-30 Online reputation management deals with monitoring and influencing the online record of a person an organization or a product The Social Web offers increasingly simple ways to publish and disseminate personal or opinionated information which can rapidly have a disastrous influence on the online reputation of some of the entities The author focuses on the Social Web and possibilities of its integration with the Semantic Web as resource for a semi automated tracking of online reputations using imprecise natural language terms The inherent structure of natural language supports humans not only in communication but also in the perception of the world Thereby fuzziness is a promising tool for transforming those human perceptions into computer artifacts Through fuzzy grassroots ontologies the Social Semantic Web becomes more naturally and thus can streamline online reputation management For readers interested in the cross over field of computer science information systems and social sciences this book is an ideal source for becoming acquainted with the evolving field of fuzzy online reputation management in the Social Semantic Web area *Making Sense of Data III* Glenn J. Myatt,Wayne P. Johnson,2011-09-09 Focuses on insights approaches and techniques that are essential to designing interactive graphics and visualizations *Making Sense of Data III A Practical Guide to Designing Interactive Data Visualizations* explores a diverse range of disciplines to explain how meaning from graphical representations is extracted Additionally the book describes the best approach for designing and implementing interactive graphics and visualizations that play a central role in data exploration and decision support systems Beginning with an introduction to visual perception

Making Sense of Data III features a brief history on the use of visualization in data exploration and an outline of the design process. Subsequent chapters explore the following key areas: Cognitive and Visual Systems describes how various drawings, maps, and diagrams known as external representations are understood and used to extend the mind's capabilities; Graphics Representations introduces semiotic theory and discusses the seminal work of cartographer Jacques Bertin and the grammar of graphics as developed by Leland Wilkinson; Designing Visual Interactions discusses the four stages of design process: analysis, design, prototyping, and evaluation, and covers the important principles and strategies for designing visual interfaces; information visualizations and data graphics; Hands on Creative Interactive Visualizations with Protovis provides an in-depth explanation of the capabilities of the Protovis toolkit and leads readers through the creation of a series of visualizations and graphics. The final chapter includes step-by-step examples that illustrate the implementation of the discussed methods, and a series of exercises are provided to assist in learning the Protovis language. A related website features the source code for the presented software, as well as examples and solutions for select exercises. Featuring research in psychology, vision science, statistics, and interaction design, Making Sense of Data III is an indispensable book for courses on data analysis and data mining at the upper undergraduate and graduate levels. The book also serves as a valuable reference for computational statisticians, software engineers, researchers, and professionals of any discipline who would like to understand how the mind processes graphical representations.

Visible Numbers Charles Kostelnick, 2017-07-05 Bringing together scholars from around the world, this collection examines many of the historical developments in making data visible through charts, graphs, thematic maps, and now interactive displays. Today we are used to seeing data portrayed in a dizzying array of graphic forms. Virtually any quantified knowledge from social and physical science to engineering and medicine, as well as business, government, or personal activity, has been visualized. Yet the methods of making data visible are relatively new innovations, most stemming from eighteenth and nineteenth-century innovations that arose as a logical response to a growing desire to quantify everything from science, economics, and industry to population, health, and crime. Innovators such as Playfair, Alexander von Humboldt, Heinrich Berghaus, John Snow, Florence Nightingale, Francis Galton, and Charles Minard began to develop graphical methods to make data and their relations more visible. In the twentieth century, data design became both increasingly specialized within new and existing disciplines: science, engineering, social science, and medicine, and at the same time became further democratized with new forms that make statistical, business, and government data more accessible to the public. At the close of the twentieth century and the beginning of the twenty-first, an explosion in interactive digital data design has exponentially increased our access to data. The contributors analyze this fascinating history through a variety of critical approaches, including visual rhetoric, visual culture, genre theory, and fully contextualized historical scholarship.
