doesn't also have the conditioning and requisite lung capacity to go the distance in a chosen discipline. It also follows that an athlete with great stamina but lacking explosive power will not reach his or her full potential. Generally speaking, a bigger muscle tends to be a stronger muscle, however, one need not be overly developed to showcase unparalleled strength. This is because the best, most rounded sporting performance depends on the application of four major elements: strength, speed, capacity, and accuracy. Combining strength training with conditioning work allows an athlete to master these skill sets; he or she will not only be able to handle a heavier load but will also develop greater aerobic capacity.
