Properties of Matter

QUESTIONS

Are you able to distinguish, based on the questions in school

- Why are solids, liquids and gasses grouped together?
- Why are substances and mixtures classified together?

What Are Physical Properties?

Start with the solids in the diagram below as shown in a table and record the names of their common properties.

If physical properties of substances that can be observed without changing the identity of the substance, then the properties of an object can be observed. For example, you can identify an object's color, shape, size, or weight. In general, the properties of an object are determined by the properties of the materials the object is made of.

Many of the physical properties of materials that make up objects can be measured. These properties include density, hardness, magnetism, and the ability to conduct heat and electricity.

Some physical properties depend on how much of a material you have. In other words, a large amount of a material may have different properties than a smaller amount of the material. Other physical properties do not depend on how much of the material you have. They show that no matter how large or small a sample of material is, the particular property is always the same.
