## Algorithm design and problem solving

1 Identify and describe three stages of the program development lifecycle.

- 1 **Analysis** - a stage which helps the programmer identify the main problem. It uses abstraction and decomposition.
- 2 **Design** - a stage which dictates and shows how the program to solve the identified problem in the analysis stage. It uses structure diagrams, flowcharts, and pseudocode.
- 3 **Testing** - a stage which tests the program design from the previous stage ~~the~~.

2 Abstraction, decomposition and structure diagrams are tools used during the program development lifecycle. Identify the stage of the program development lifecycle where they are used and describe what they are used for.

### Abstraction

Stage: Analysis

Use: It saves the key elements required for the second stage, and it discards the unnecessary information and data.

### Decomposition

Stage: Analysis

Use: It breaks down the existing programs into smaller parts or steps to be solved more easily.
