Genetic Variation In Solanum:

Genetic Variability and Fruit Morphological Diversity in the Tomato Germplasm Ramhari Thapa, 2014 Tomato *Solanum lycopersicum* L. broadly divided into two varieties *Solanum lycopersicum* var *lycopersicum* domesticated tomato and the weedy *Solanum lycopersicum* var *cerasiforme* cherry tomato is closely related to the wild tomato species *Solanum pimpinellifolium*. Studies show presence of a very low genetic diversity among tomato cultivars which is estimated to be lower than 5% of that available in nature. With the estimation of such a low level of genetic variability in the germplasm assessment of the extent and nature of the genetic variation in tomatoes would be important for breeding and genetic resource conservation programs. I used AFLP data to analyze the genetic variability within the germplasm of *Solanum lycopersicum* var *cerasiforme* 112 accessions and genetic variability along with fruit morphological diversity in the accessions of *Solanum lycopersicum* var *lycopersicum* 219 accessions from different parts of the World. Cherry tomato *Solanum lycopersicum* var *cerasiforme* in terms of genetic distance and molecular variance 1% molecular variance was very close to *Solanum lycopersicum* var *lycopersicum* than its wild sister taxa *Solanum pimpinellifolium* 20% molecular variance. It also showed more genetic diversity H_j 0.42052-0.48361 than that of *S. l. lycopersicum* H_j 0.26008-0.42017 and among its geographic groups South American accessions had more genetic diversity H_j 0.43703-0.48361 than that of Mesoamerican H_j 0.42052-0.46946 and Caribbean accessions H_j 0.42287. The germplasm of *S. l. lycopersicum* showed presence of more genetic diversity in the accessions from Western South America, Caribbean and Mediterranean regions H_j 0.42017 and Mesoamerica H_j 0.41790, the places associated with tomato domestication and subsequent dispersal after domestication. Studied tomato germplasm was divided into three genetically distinct clusters K3 and one of the clusters cluster 3 in *S. l. lycopersicum*.

Assessment of Genetic Variation in Tomato (*Solanum Lycopersicum* Mill.) Gyanendra Kumar Rai, Deeksha Jamwal, 2016-10-14 *Plant Regeneration and Genetic Variability* Indra Vasil, 2012-12-02 *Plant Regeneration and Genetic Variability* *Genetic Diversity in Plants* Mahmut Caliskan, 2012-03-14 Genetic diversity is of fundamental importance in the continuity of a species as it provides the necessary adaptation to the prevailing biotic and abiotic environmental conditions and enables change in the genetic composition to cope with changes in the environment. Genetic Diversity in Plants presents chapters revealing the magnitude of genetic variation existing in plant populations. The increasing availability of PCR based molecular markers allows the detailed analyses and evaluation of genetic diversity in plants and also the detection of genes influencing economically important traits. The purpose of the book is to provide a glimpse into the dynamic process of genetic variation by presenting the thoughts of scientists who are engaged in the generation of new ideas and techniques employed for the assessment of genetic diversity often from very different perspectives. The book should prove useful to students, researchers and experts in the area of conservation biology, genetic diversity and molecular biology. **Breaking the myth: Breeding for stress tolerance, grain yield, and quality traits simultaneously by diversifying the narrow genetic**
