*Shared Tacit Knowledge* Hui Chen, Miguel Baptista Nunes, 2023-05-19 This book addresses the identification and classification of knowledge acquired through experience that results from engaging in professional activities within the software industry. As a result of this study, the book presents an ontology of such professional activities that require and enable the acquisition of experience and that in turn are the basis for tacit knowledge creation. The rationale behind the creation of such an ontology was based on the need to externalize this tacit knowledge and then record such externalizations so that these can be shared and disseminated within and across organizations. The book discusses the very concise manner in which experienced software development practitioners in China understand the nature and value of experience in the SW industry. Effectively communicate with other stakeholders in the software development process are able and motivated to actively engage with continuous professional development are able to share knowledge with peers and the profession at large and effectively work on projects and exhibit a sound professional attitude both internally to their own company and externally to customers, partners, and even competitors. The book also discusses the ontology and the qualitative process that are generated by bridging two extremely topical aspects of practice in the software industry, namely employability skills and competencies. The book is of interest to academics in the areas of knowledge management and information systems as well as human resources practitioners concerned with selection and development and knowledge and information professionals in software organizations.

*Software Metrics* Norman Fenton, James Bieman, 2014-10-01 A Framework for Managing Measuring and Predicting Attributes of Software Development Products and Processes. Reflecting the immense progress in the development and use of software metrics in the past decades, *Software Metrics: A Rigorous and Practical Approach*, Third Edition, provides an up-to-date, accessible, and comprehensive introduction to software metrics. Like its popular predecessors, this third edition discusses important issues, explains essential concepts, and offers new approaches for tackling long-standing problems. New to the Third Edition: This edition contains new material relevant to object-oriented design, design patterns, model-driven development, and agile development processes. It includes a new chapter on causal models and Bayesian networks and their application to software engineering. This edition also incorporates recent references to the latest software metrics activities, including research results, industrial case studies, and standards. Suitable for a Range of Readers: With numerous examples and exercises, this book continues to serve a wide audience. It can be used as a textbook for a software metrics and quality assurance course or as a useful supplement in any software engineering course. Practitioners will appreciate the important results that have previously only appeared in research-oriented publications. Researchers will welcome the material on new results as well as the extensive bibliography of measurement-related information. The book also gives software managers and developers practical guidelines for selecting metrics and planning their use in a measurement program.

**Project Management of Large Software-Intensive Systems** Marvin Gechman, 2019-03-11 The book describes how to manage and successfully deliver large, complex, and expensive systems that can be composed of millions of

line of software code being developed by numerous groups throughout the globe that interface with many hardware items being developed by geographically dispersed companies where the system also includes people policies constraints regulations and a myriad of other factors It focuses on how to seamlessly integrate systems satisfy the customer s requirements and deliver within the budget and on time The guide is essentially a shopping list of all the activities that could be conducted with tailoring guidelines to meet the needs of each project
