*Reintroducing Macroeconomics* Steven Mark Cohn, 2015-01-28 This lively introduction to heterodox economics provides a balanced critique of the standard introductory macroeconomic curriculum In clear and accessible prose it explains many of the key principles that underlie a variety of alternative theoretical perspectives including institutionalist economics radical economics Post Keynesian economics feminist economics ecological economics Marxist economics social economics and socioeconomics Because the book s structure parallels the chapters and subject matter presented in a typical introductory macroeconomics textbook Reintroducing Macroeconomics provides readers with a running commentary on the standard approach while simultaneously introducing them to a broader range of ideas about the causes and appropriate policy responses to a wide range of common economic problems Although designed primarily as a companion volume for students in introductory economics courses the book can also be used effectively for more targeted applications that highlight a particular economic issue or approach It will be of particular interest to students in related disciplines such as American Studies anthropology black studies environmental studies gender studies history political science and sociology who may be required to take introductory economics classes and who are interested in gaining an alternative perspective By demonstrating the vitality and common ground underlying a broad spectrum of heterodox approaches Reintroducing Macroeconomics brings alternative perspectives into the classroom in an accessible way that empowers students to think about the economy in new and exciting ways The text includes end of chapter study questions as well as a detailed note to instructors

**The capitalist mode of destruction** Costas Panayotakis, 2021-02-09 The capitalist mode of destruction traces contemporary capitalism s economic ecological and democratic crises Combining insights from a range of disciplines including psychology sociology and political economy Panayotakis interprets these crises as manifestations of a previously unrecognized contradiction over time the benefits of capitalism s technological dynamism tend to decline even as its threats to humanity and the planet continue to mount To explain this contradiction the book analyzes the production and distribution of surplus in capitalist societies and rethinks the concept of surplus itself Identifying the public sector and households as sites of production no less important than the

workplace this book attributes capitalism's contradictions to working people's lack of control over the surplus they produce. This lack of control is undemocratic and threatens the planet. Only a classless society in which working people democratically determine the size and use of the surplus they produce can effectively respond to our current predicament. Recognizing such a democratic classless society as the essence of the communist ideal, the book argues that far from becoming obsolete, this ideal is ever more indispensable. But since the necessity of this ideal does not guarantee its realization, the book also investigates the conditions necessary for the formation of an anti-capitalist alliance for social justice, democracy, and ecological sustainability.

Environmental Adaptation and Eco-cultural Habitats Johannes Schubert, 2015-10-23. In this challenging and highly original book, the author tackles the dynamic relationships between physical nature and societies over time. It is argued that within each eco-cultural habitat, the relationship between physical nature and society is mediated by specific entanglements between technologies, institutions, and cultural values. These habitat-specific entanglements are neither ecologically nor culturally predetermined but result from mutual adaptation based on variation, trial and error, and selection. It is shown how a variety of eco-cultural habitats evolves from this coevolutionary process. The book explores how these varieties come into being and how their specific characteristics affect the capacity to cope with environmental or social problems such as flooding or unemployment. There are two case studies illustrating the potential of a coevolutionary understanding of the society-nature nexus. In the first, rural and urban settlement structures are conceptualized as distinct paths of eco-cultural adaptation. It is shown that each of these paths is characterized by predictable spatial correspondences between dwelling technologies, modes of social reproduction, cultural preferences, and related patterns in energy consumption, i.e. social metabolism. The second case study deals with flood protection in liberal and coordinated eco-welfare and production regimes, drawing on lessons from the Netherlands and Hurricane Katrina in New Orleans. As a contribution to theory in environmental sociology, the coevolutionary perspective developed provides deeper insights into the intricate interplay between physical and social nature.

Remaking Scarcity Costas Panayotakis, 2011-09-12. The dominant schools of neoclassical and neoliberal economics tell us that material scarcity is an inevitable product of an insatiable human nature. Against this, Costas Panayotakis argues that scarcity is in fact a result of the social and economic processes of the capitalist system. The overriding importance of the logic of capital accumulation accounts for the fact that capitalism is not able to make a rational use of scarce resources and the productive potential at the disposal of human society. Instead, capitalism produces grotesque inequalities and unnecessary human suffering, a toxic consumerist culture that fails to satisfy and a deepening ecological crisis. Remaking Scarcity is a powerful challenge to the current economic orthodoxy. It asserts the core principle of economic democracy: that all human beings should have an equal say over the priorities of the economic system as the ultimate solution to scarcity and ecological crisis.
