$c_j - z_j$		12	18	10	0	0	0		

- Iteration 1

- Step 1: Determine the Entering Variable

The most positive  $c_j - z_j = 18$ . Thus  $x_2$  is the entering variable.

Price, Ghaith Rabadi, 2018-08-06 Operations Research A Practical Introduction is just that a hands on approach to the field of operations research OR and a useful guide for using OR techniques in scientific decision making design analysis and management The text accomplishes two goals First it provides readers with an introduction to standard mathematical models

and algorithms Second it is a thorough examination of practical issues relevant to the development and use of computational methods for problem solving Highlights All chapters contain up to date topics and summaries A succinct presentation to fit a one term course Each chapter has references readings and list of key terms Includes illustrative and current applications New exercises are added throughout the text Software tools have been updated with the newest and most popular software Many students of various disciplines such as mathematics economics industrial engineering and computer science often take one course in operations research This book is written to provide a succinct and efficient introduction to the subject for these students while offering a sound and fundamental preparation for more advanced courses in linear and nonlinear optimization and many stochastic models and analyses It provides relevant analytical tools for this varied audience and will also serve professionals corporate managers and technical consultants
