The Science And Engineering Of Granulation Processes 1st Edition:

The Science and Engineering of Granulation Processes Jim Litster, Bryan Ennis, 2013-06-29 This book had its origins in a meeting between two relatively young particle technology researchers on Rehobeth Beach in Delaware in 1992 near the holiday house of Reg Davies then Director of the Particle Science and Technology Research Center in Dupont As we played in the sand we shared an excitement for developments in particle technology especially particle characterization that would lead operations such as granulation to be placed on a sound scientific and engineering footing The immediate outcome from this interaction was the development of new industry short courses in granulation and related topics which we taught together both in Australia and North America This book follows closely the structure and approaches developed in these courses particularly the emphasis on particle design in granulation where the impact of both formulation properties and process variables on product attributes needs to be understood and quantified The book has been a long time in the making We have been actively preparing the book for at least five years Although the chapters have relatively good bibliographies this book is not a review of the field Rather it is an attempt by the authors to present a comprehensive engineering approach to granulator design scale up and operation It is exciting for us to see the explosion of research interest around the world in this area in the last five to seven years Some of the most recent work will have to find its way into the second edition

Current Perspective to Predict Actual Evapotranspiration Daniel Bucur, 2017-05-24 Evapotranspiration is the largest outgoing water flux from the Earth's surface its accurate quantification is critical for the crop development in conditions of the climate changes from recent decades and it can contribute to a greater understanding of a range of agricultural ecosystem processes To evaluate the hydric requirements of the crops it was agreed that they should be reported to a maximum global evapotranspiration called potential evapotranspiration To estimate this variable a variety of methods were developed each with its benefits as well as trade offs Their use however is laborious due to their complexity and of the large number of parameters required In this book specialists concerns worldwide to develop simple but reliable methodologies with less data requirement which will give accurate and appropriate results are presented In addition a study of the physics of the moisture evaporation process from porous media to elucidate what are the mechanisms of moisture migration from granular biopesticides is presented in the last chapter

Design and Processing of Particulate Products Jim Litster, 2016-10-20 A unique text providing comprehensive coverage of fundamental particle science processing and technology Including quantitative tools real world case studies and end of chapter problems it is ideal for students in engineering and applied sciences as well as for practitioners in a range of industries manufacturing particulate products
