*The importance of the structures of the construction market for the implementation of the BIM method in an international comparison* Esra Korff, 2019-07-24 Master s Thesis from the year 2019 in the subject Engineering Civil Engineering Technical University of Braunschweig Institut f r Bauwirtschaft und Baubetrieb language English abstract Why is Germany behind the UK US and Finland in BIM and how can Germany catch up again Over the years of the rise of BIM numerous scientific papers have been written in various countries about structural barriers to BIM

Sometimes about structural barriers that exist in certain countries like Becerik Gerber Rice s 2010 The perceived value of building Information Modeling in the U S Building Industry structural barriers that exist in certain areas like Jeong et al s 2015 BIM acceptance model in construction organisations or general investigations in structural barriers to BIM like Azahr et al s 2017 Building Information Modelling BIM uptake Clear benefits understanding its implementation risks and challenges Scientific papers about structural barriers to BIM in Germany are however still rare and mostly in form of statistics such as Braun et al 2015 To conduct a comprehensive search for structural barriers to BIM and corresponding solutions in Germany an individual approach is hence chosen In a broad international literature review potential structural barriers to BIM are identified from different sources such as the ones named above On the basis of such possible barriers to BIM a comparison of Germany with the BIM leading countries UK US and Finland is conducted This shall reveal what structural barriers are in effect in Germany that are non existent or already overcome in the other countries to derive corresponding suggestions for Germany Where a differentiation between market participants is necessary in this work the focus is put on contractors To conduct this research the course of this work is chosen as the following It starts in the second chapter with a roundup about BIM and its potential to provide a common information base for this work In the third chapter it is then documented how the UK US and Finland are ahead of Germany with regard to BIM As the reasons for these countries advantage are to be found in a comparison with Germany the methodology for such case study analysis is developed in the fourth chapter Following this methodology possible structural barriers to BIM of a countries AEC industry are identified in the fifth chapter In the sixth chapter the UK US and Finland are compared with Germany according to these identified structural barriers to find out where significant differences exist Getting to Grips with BIM James Harty, Tahar Kouider, Graham Paterson, 2015-12-14 With the UK government s 2016 BIM threshold approaching support for small organisations on interpreting filtering and applying BIM protocols and standards is urgently required Many small UK construction industry supply chain firms are uncertain about what Level 2 BIM involves and are unsure about taking first steps towards having BIM capability As digitisation increasingly impacts on work practices Getting to Grips with BIM offers an insight into an industry in change supplemented by practical guidance on managing the transition towards more widespread and integrated use of digital tools to manage the design construction and whole life use of buildings

Organization and Digitization of Information about Buildings and Civil Engineering Works, Including Building Information Modelling (BIM) ,2019 The BIM Manager's Handbook Dominik Holzer, 2016-05-02 The BIM Manager s Handbook Guidance for Professionals in Architecture Engineering and Construction Building Information Modelling BIM is a design and construction software that manages not just graphics but also information information that enables the automatic generation of drawings and reports design analysis schedule simulation facilities management and cost analysis ultimately enabling any building team to make better informed decisions This allows a range of professionals architects engineers

construction managers surveyors cost estimators project managers and facility managers to share this information throughout a building's lifecycle BIM is now recognized worldwide for the efficiencies it delivers in terms of working collaboratively communication processes cost savings and a property's lifecycle management With the widespread adoption of BIM BIM Managers have become a much needed new breed of professionals in architectural engineering and construction practice Their role is often misunderstood and ill defined and such are the day to day deliverables that they are likely to face The BIM Manager's Handbook provides an in depth account of the breadth of activities that any BIM Manager or staff member who is actively engaged in the delivery of project is required to undertake Providing prereleases of the final work The BIM Manager's Handbook ePart series isolates significant topics around BIM management In the sixth and final ePart BIM is taken to the next level by outlining what is required to truly excel as a BIM Manager It highlights how BIM Managers acquire the necessary communication skills to maximize an efficient information flow between the BIM Manager and others It illustrates how BIM Managers tie their activities to cutting edge BIM research and development globally Lastly this ePart lays out how to promote BIM excellence both within an organization and beyond
