An Introduction To Bicomponent Fibers Hills Inc:

Resorbable Fiber-Forming Polymers for Biotextile Applications Chirag R. Gajjar, Martin W. King, 2014-07-05 This book summarizes the properties and applications of conventional and commercially available fiber forming bioresorbable polymers as well as those currently under study for use as biotextiles Factors affecting the performance of these biomaterials are presented and precautionary measures to reduce premature hydrolytic degradation during manufacturing and processing are discussed Because of the structural requirements of medical devices and the technological advancements in synthetic fibers and textile technology the new field of Biotextiles has evolved to exploit the potential of various woven knitted braided and non woven textile structures for biomedical applications Textile substrates provide certain unique mechanical properties to the medical device and because of an inherently high level of porosity they can encourage cell growth and promote migration and proliferation Bioresorbable devices that assist in the repair and regeneration of damaged tissues have in recent years replaced many of the permanent prosthetic devices Thus the topic of Bioresorbable Biomaterials generates much interest and research activity in the field of biomaterials science today For this reason the use of bioresorbable polymers as fibers is currently dominating the field of resorbable biomaterials for applications from sutures to tissue engineering scaffolds

Textile Technology Digest, 2002 *Trace Evidence Analysis* Max M. Houck, 2003-12-03 *Trace Evidence Analysis* continues and builds upon the tradition of its successful companion title *Mute Witnesses* 2000 The book contains nine entirely new cases each self contained in its own chapter covering everything from homicides to accident reconstruction It includes contributions from some of the premier forensic scientists in the field who provide detailed accounts of the process of collection classification and analysis of microscopic evidence to draw definitive conclusions that solved actual cases The book discusses the role of evidence in solving cases and explores the legal and ethical responsibility of the forensic scientist It examines real world application of scientific methods and analytic principles including evidence gathering instrumentation sampling methods analysis and interpretation and features over 160 full color figures that illustrate the relevant case evidence This book is a recommended resource for forensic microscopists and trace evidence analysts crime laboratories crime scene technicians criminal investigators forensic science professionals and students and the legal community Contains contributions from some of the premier forensic scientists in the field Discusses the role of evidence in solving cases and explores the legal and ethical responsibility of the forensic scientist Explores real world application of scientific methods and analytic principles including evidence gathering instrumentation sampling methods analysis and interpretation Includes over 160 full color figures that illustrate the relevant case evidence [A.T.A. Journal](#), 2000 **Introduction to Nonwovens Technology** Subhash Kumar Batra, Behnam Pourdeyhimi, 2012 The processing of nonwovens depends on a range of technologies some adapted from the textile and paper industries others developed uniquely for nonwovens production The present volume provides a systematic step by step explanation of virtually all processes that integrate relevant raw materials

into finished nonwovens for different end uses In comprehensive terms the book explains the connection between the structure of nonwovens and the specialized as well as still evolving technologies used to produce them from simple roll goods to nanoscale webs and fiberwebs The unified treatment in the book is meant to serve the needs of engineering and technology students For students and instructors the text also offers reviews of basic chemistry polymer physics and heat transfer concepts which are linked to processing and design information Problems and exercises are presented for classroom study and individual practice The book can also be used profitably as a self teaching tool by professionals working in or new to the nonwovens industry From the Foreword by John Hearle In comparison with other publications the present book covers the great diversity of nonwovens and emphasizes how new types of nonwovens can be created through the use of novel fibres This approach integrates many aspects of fibres and textile structures that are not associated with the conventional forms of nonwovens which were established over the last fifty years In this sense the book summarizes existing technical knowledge and suggests ways of going beyond it
