

# A Look at the Revised ANSI Z97.1 Standard

## Changes in the 2009 Updated Standard

by Kevin Olah and Julia Schimmelpenninck

After five years of conscientious work by the members of the American National Standards Institute's (ANSI) Accredited Standards Committee (ASC) Z97, the update to the *American National Standard for Safety Glazing Materials Used in Buildings – Safety Performance Specifications and*

*Methods of Test* (ANSI Z97.1) has been completed. The 2009 edition is now available for public sale and distribution.

The 2009 version contains several modifications and new material over the previous version. The modifications add clarity of purpose, intent and procedures. Depending on the need, sections

have been re-written and new sections added to provide additional assurance that the intended safe-break characteristics have been achieved before a test specimen may be declared compliant or "qualified" under ANSI Z97.1. Documents that were referenced in the Standard also were reviewed and updated.

This Annex is a mandatory part of American National Standard Z97.1-2009 and indicates the publication year of the applicable standard referenced in ANSI Z97.1-2009.

### Background to the Update

Due to historical precedence and a desire for harmonization with the influential Standard CPSC 16 CFR 1201 – *Safety Standard for Architectural Glazing Materials* the Accredited Standards Committee (ASC) struggled at the front end of the revision cycle with the scope and limitations of the document. Several international standards were studied during this revision process to gain a better understanding of global positions and intent for safety glazing. In the end, the 2009 update is a Standard that, if enforced, will lead to a reduced number of cutting and piercing injuries sustained by humans who accidentally impact properly specified and installed safety glazing materials.

The Standard is written specifically for architectural glazing materials subjected to accidental human impact. The committee recognized that safety glazing configurations, tested and deemed to pass in accordance with this Standard, may be used in applications other than those specifically identified in the scope—for
