The Calculation of Chemical Equilibrium in a Complete System Kenneth Albert Kobe, Thomas W. Leland, 1954 The Computation of Chemical Equilibria F. van Zeggeren, S. H. Storey, 2011-02-17 This 1970 book the authors derive the equations describing equilibria in different types of system and outline the effect of variation of the parameters of the system on the equilibrium composition by using equilibrium calculations in high temperature high pressure processes in rocketry and in explosives technology *Notes on Chemical Equilibrium* Arthur Renwick Middleton, 1927 Chemical Equilibria in Solution M. Science Foundation Course, 1979 **An Analytical Investigation of Three General Methods of Calculating Chemical-equilibrium Compositions** Frank J. Zeleznik, Sanford Gordon, 1960 The Brinkley Huff and White methods for chemical equilibrium calculations were modified and extended in order to permit an analytical comparison The extended forms of these methods permit condensed species as reaction products include temperature as a variable in the iteration and permit arbitrary estimates for the variables It is analytically shown that the three extended methods can be placed in a form that is independent of components In this form the Brinkley iteration is identical computationally to the White method while the modified Huff method differs only slightly from these two The convergence rates of the modified Brinkley and White methods are identical and further all three methods are guaranteed to converge and will ultimately converge quadratically It is concluded that no one of the three methods offers any significant computational advantages over the other two *Chemical Equilibria* Philip James Hills, 1969
