Computing Concepts An Artificial History of Natural Intelligence David W. Bates,2024-04-02 What would it mean to make a decision against the acceleration of automation and for humanity In An Artificial History of Natural Intelligence David W Bates lays the groundwork for such a decision by rethinking the history of human cognition and its entanglements with technology Tracing evolving lines of thought from the early modern period to the present Bates confronts the intimate connection between autonomy and automaticity in how we have understood the capacities of the human mind At the heart of this entanglement is a total mechanistic understanding of nature that began in the seventeenth century and saw the body as machine the nervous system as control mechanism and the brain as the center of cognition Reading varied thinkers from Descartes to Kant to Turing Bates reveals how new ideas and experiences reconfigured the ways in which the automaticity of the body could be linked with technical systems while at the same time the mind could still create the space for autonomy The result is a new theorization of the human in which the human dependent on technology produces itself as an artificial automation that has no natural origin

Local Theories of Argument Dale Hample,2021-03-25 Argumentation is often understood as a coherent set of Western theories birthed in Athens and developing throughout the Roman period the Middle Ages the Enlightenment and Renaissance and into the present century Ideas have been nuanced developed and revised but still the outline of argumentation theory has been recognizable for centuries or so it has seemed to Western scholars The 2019 Alta Conference on Argumentation co sponsored by the National Communication Association and the American Forensic Association aimed to question the generality of these intellectual traditions This resulting collection of essays deals with the possibility of having local theories of argument local to a particular time a particular kind of issue a particular place or a particular culture Many of the papers argue for reconsidering basic ideas about arguing to represent the uniqueness of some moment or location of discourse Other scholars are more comfortable with the Western traditions and find them congenial to the analysis of arguments that originate in discernibly distinct circumstances The papers represent different methodologies cover the experiences of different nations at different times examine varying sorts of argumentative events speeches court decisions food choices and sound explore particular personal identities and the issues highlighted by them and have different overall orientations to doing argumentation scholarship Considered together the essays do not generate one simple conclusion but they stimulate reflection about the particularity or generality of the experience of arguing and therefore the scope of our theories

The Humanized Internet Akram Alfawakheeri,Monique J. Morrow,2025-11-19 Enterprising the Internet has been a process over the past years and while this book does not set judgement it does call for a moment of pause and reflection on the impact of these technologies to individuals There are constant key themes throughout this book such as the notion of identity and identity sets e sovereignty and privacy but most importantly the function of an Internet that is inclusive and not controlled by a few organizations for their own profitability This is The Humanized Internet These tenets may sound libertarian but in fact we are talking about the core principles that guide the development and

perhaps the return of the Internet to the people especially those who are underserved Do no evil should not just be a company motto but the driving principle behind the development of any technologies that do impact us as individual consumers of these technologies and corresponding products Indeed there is a polarity between and Internet that is used for mass empowerment and one that can be used for mass destruction Privacy security and the management of your digital footprint should be done by you With the progression of human and machine interaction due to advances in biotech and the brain computer interface the cloud and virtual mixed reality we need to understand the impacts of these technologies to identity overall Do we require a new definition of identity What is e sovereignty and its application moving forward if we posit that the institutions that exist today may no longer be relevant in their current structure We have all read about the abuses that occur when your data falls into the hands of other entities intentionally or not The Humanized Internet is therefore a call to action your action

Privacy in the Age of Neuroscience David Grant,2021-04-15 Neuroscience has begun to intrude deeply into what it means to be human an intrusion that offers profound benefits but will demolish our present understanding of privacy In Privacy in the Age of Neuroscience David Grant argues that we need to reconceptualize privacy in a manner that will allow us to reap the rewards of neuroscience while still protecting our privacy and ultimately our humanity Grant delves into our relationship with technology the latest in what he describes as a historical series of magnitudes following Deity the State and the Market proposing the idea that for this new magnitude Technology we must control rather than be subjected to it In this provocative work Grant unveils a radical account of privacy and an equally radical proposal to create the social infrastructure we need to support it
