With the simple press of a button we are able to transmit and receive any sort of data whether it be an audio file, a video clip, or an electronic mail message. On the other hand, have we ever given any thought to the integrity of the data that is being sent, making certain that no information is disclosed? It is possible for security to be compromised via the use of paper documents, fax machines, and even interpersonal conversation. Security breaches that include digital information may have substantially more severe repercussions than those that involve traditional information, since digital information may be transmitted more easily and to a significantly broader audience. The answer lies in internet security. With regard to the infrastructure that is considered to be conventional, the Internet is now increasing at a pace of knots.
